

Spray Foam Insulation Shown To Be Highly Energy Efficient

August 31, 2015

August 31, 2015 - PRESSADVANTAGE -

Rvalue Pros, a St. Louis spray foam contractor, has announced that the spray foam insulation it has been installing in homes and other buildings, has been shown to be highly energy efficient. It was found that this is in fact one of the most energy efficient ways of insulating a building. Having a strong commitment to sustainability, the company is keen to encourage customers to consider it as part of their own durability strategies.

A representative from Rvalue Pros says: "Being sustainable is incredibly important in this day and age. It provides benefits for building owners and occupants alike, and also for the environment. We all need to make an effort to protect our planet. We only have one planet to live on, after all."

Foam insulation has been shown to be highly effective as both an air sealer and a waterproofing agent. This is why it should be part of any building's sustainability and durability strategies. Spray foam insulation has one of the highest R-value and performance characteristics of all types of insulation. This means that, when properly applied by professionals, they contribute tremendously to the energy efficiency of a building. As a result, building owners, be they homes, offices or warehouses, can experience substantial financial savings on their energy bills as well.

"We specialize in meeting or exceeding the thermal efficiency expectations for the homeowner and builder alike," adds the spokesperson. "Whether it's new construction, renovation, or improving the existing insulation properties of your home or business, spray foam insulation applied by R-Value Pros will give you a stronger, healthier, and more energy efficient home or business compared with old insulation techniques."

Through the company's website rvaluepros.com, they provide information on how an office building or home can be fully protected with the most energy efficient type of insulation. The company works with buildings across the great St. Louis, Missouri and St. Charles area. They pride themselves on their professional service and high quality work. All employees have a significant amount of experience and are fully licensed and insured to deliver the needed work. They offer a range of different spray foam insulation products, so that

they can be applied to various conditions.
