

Cannabis Lean Manufacturing Consultant Launches New Website

April 06, 2020

April 06, 2020 - PRESSADVANTAGE -

Green Worx Consults LLC, a cannabis lean manufacturing consultant based in Tucson, Arizona, has announced that they have recently launched a new website. The purpose of the new site is to help in improving their ability to reach out to clients with information on how to streamline their business processes to help decrease expenses and enhance efficiency, all of which will help in boosting their bottom line.

Green Worx Consults CEO Jason Hostens says, "We're happy and excited to announce the launch of our new website. This is because this new site has been designed in such a way that it makes it easier for site visitors to search for the information that they're looking for. These are potential clients who would like to achieve a lean manufacturing system that will allow them to boost their efficiency and minimize costs."

The services provided by Green Worx are necessary because as the licensed cannabis industry expands, their ability to scale up fast will be restricted by the ease of workflow set up, management of defects, and monitoring. They are ready to provide business process management and standardization services, metric development, standard operating procedure development, Lean, and 6 Sigma services to all sectors of the cannabis and hemp markets. They are also ready to help in solving any manufacturing, business, and service

process problem.

Green Worx offers businesses advice on standard work, quality management, operating procedures, and continuous improvement. These are all vital in allowing the business to be nimble in a rapidly changing marketplace. Their methods for continuous improvement and project management are the same methods that were used by companies like GE, Verizon, Toyota, United Healthcare, Aetna, Amazon, and others to establish operating procedures, standard work, and quality management in order to avoid defects, reduce cycle time, and eliminate waste and reworks.

This enables the businesses to successfully integrate quality into every process. All of that is done for businesses by Green Worx Consults. They provide business process management development services, aside from lean process improvement, 6 Six Sigma (DMAIC, Quick Sigma, Agile Sigma) consulting and project management services to all of the different sectors of the hemp and cannabis industries.

Lean manufacturing is focused on continually striving to eliminate waste from the manufacturing process. Waste is any activity that doesn't add value from the point of view of the customer. A study by the Lean Enterprise Research Center has revealed that 60 percent of production activities in a typical manufacturing operation do not really add value for the customer and are therefore considered as waste. Fortunately, every business has a lot of opportunity to improve and get rid of waste with the application of lean manufacturing techniques.

Meanwhile, Six Sigma is a technique that provides the tools for businesses to enhance the capability of their business processes. The Six Sigma process results in an improvement on business performance and the reduction in process variation, thus helping in the reduction of defects and in increasing profits and improving the quality of products or services, and boosting of employee morale.

Six Sigma involves a number of concepts. These include the use of teams that are given responsibility for well-defined projects that have direct impact on the company's bottom line; emphasis on the DMAIC (define, measure, analyze, improve, and control) approach to solving problems; provision of extensive training to key people on statistical thinking at all levels; and provision of a management environment that considers and supports initiatives as a business strategy.

Lean Six Sigma is an improvement philosophy that is data driven and fact-based, putting significant importance on defect prevention over defect detection. This approach is able to boost customer satisfaction and bottom line results through the minimization of variation, waste, and cycle time, while encouraging the application of work standardization and work flow.

Medical cannabis dispensaries who are interested in lean manufacturing processes may want to check out the website of Green Worx Consults LLC at <https://www.greenworxconsults.com/>, or contact them on the telephone or through email.
