Utah Disaster Specialists Share Details Of Sandy, Utah Mold Inspection

April 21, 2020

April 21, 2020 -

Centerville, Utah based Utah Disaster Specialists is reaching out to the wider community to share details regarding a recent job mold inspection job they did in Sandy, Utah. The company specializes in restoring properties that have had damage caused by fires, flooding, mold and similar incidents in Centerville and the surrounding communities.

Utah Disaster Specialists was contacted by a client who was purchasing a new house and suspected that the house might have a mold infestation. The client?s initial inspection of the house included an air sample that came back positive for mold. Utah Disaster Specialists was called in to find the mold and clean it up. After a thorough inspection, the company?s technicians discovered that the source of the mold was some boxes that had become wet while in storage, and the humid and wet conditions had allowed the mold to prosper. The company?s experts removed the boxes and cleaned the area, following which they conducted another air sample test (which came back negative).

Daryl Olsen of Utah Disaster Specialists says, ?It might not seem like it but mold is very dangerous. In this case, what our client did?to have an initial inspection and then immediately contact us once they learned that

there was the possibility of mold?is the best course of action you can take if you believe your property is at risk. If the client had gone ahead and bought the house, ignoring the air sample, there is the very real possibility that the occupants of the house would have become very sick. Since they took the right action, however, they saved themselves a lot of headaches.?

He continues, ?Many people underestimate how dangerous mold can be, and as someone who has dealt with mold for a long time now, I have to emphasize this: if you so much as suspect that you have mold, get your house inspected immediately. If you actually do have mold, get in touch with mold removal specialists to take care of it immediately before things get worse.?

As the disaster specialist company points out, mold is very dangerous. The mycotoxins that are present in mold spores have been shown to have severely negative effects on humans. Mycotoxins can cause a variety of conditions, from nose and throat irritation, burning, itching or watering eyes, to headaches and so on. In more serious cases, they can also lead to a lack of focus or concentration and even memory loss. More information about the effects of mold can be found at the following link: https://www.utahdisasterspecialists.com/mold-damage/.

The comprehensive services provided by Utah Disaster Specialists have helped them become a prominent and trustworthy disaster specialist company in Utah. On the Google platform, they have a 4.5-Star rating. In a recent 5-Star review, for instance, Marcos Marraquin says, ?My son decided to fill the tub with water and leave it running. Utah Disaster Specialists sent out Kurt and Andy to determine what steps were needed to ensure no mold would grow. They began to remove the water and what was also affected by the water. I've never felt so taken care of during an emergency scenario like this. I highly recommend this group of men and their team to come and clean your place up. Thank you.?

Similarly, Coby Johnson says in his glowing Facebook review, ?Wow, am I glad I called these guys! My home was flooding from a backed up toilet, which was getting sewage everywhere over my basement. These guys made me a priority, or if they didn't, I felt like a priority. They came to my home quickly, got all the sewage out and helped me file a claim with my insurance. There is no one I would recommend more than Utah Disaster Specialists. I would recommend them to all having similar problems as me.?
