

## **Stem Cell Therapy Clinic Still Evaluating Patients But with Precautions During Covid Closures**

*April 16, 2020*

April 16, 2020 - PRESSADVANTAGE -

Denver Regenerative Medicine | Stem Cell Therapy, HRT, Testosterone Clinic, which is based in Denver, Colorado, has announced that they continue to evaluate patients but with the necessary precautions during the Covid closures. They realized that there could be people with back pain who can't wait for the quarantine to be over. For those who are looking for pain relief during this time, they can still schedule an appointment for back pain, and the clinic can still offer procedures as they are necessary medical care.

Dr. Joel Cherdack of Denver Regenerative Medicine says, "If you feel that your back pain can't wait until the quarantine is over, don't hesitate to contact us. We'll be taking all of the necessary precautions to avoid the spread of the virus but we'll be ready to serve your needs."

He continues, "There are many advantages to stem cell therapy at our Denver Regenerative medicine clinic over surgery including faster recovery, less pain, lower cost, decreased or eliminated need to immobilize with a sling or cast and other benefits as well. Before any procedure takes place, we will meet with you for an initial consultation to evaluate your injuries and determine the best stem cell injection options for you."

Stem cells are extracted from the body of the patient and may be used to treat pain through the regeneration of damaged tissue. These cells are self-renewing and can grow into any kind of cell required by the body. Because stem cells from the patient are used to establish a customized treatment plan, there is less risk of the body rejecting the cells and can enhance the body's own natural rejuvenating abilities.

The stem cell therapy procedure has three basic steps. First, the stem cells are extracted from bone marrow, body fat, or other tissue. Second, the stem cells are conditioned to maximize their healing capability. And third, the stem cells are injected into the area where they can have their maximum effect. Denver Regenerative Medicine utilizes stem cell therapy for the treatment of the deterioration of the joints of the elbows, knees, hips, and shoulders and to enhance the healing of soft tissues. Those who would like to know more about stem cell therapy and the clinic may want to follow the Denver Regenerative Medicine Facebook page.

Meanwhile, hormone replacement therapy (HRT) is offered for hormone imbalance problems. For men, HRT may be able to combat a number of symptoms, such as reduced interest in sex, erectile dysfunction, lower muscle mass and increased body fat, fatigue, loss of body and facial hair, and depression and cognitive issues. For women, HRT may be able to deal with a number of issues, such as thinning hair; irregular menstrual cycles; painful or unusually heavy periods; weight gain; increased growth of hair on the face, chest, neck, or back; hot flashes; and vaginal dryness.

Also available is the REjuvenate? Therapy (for Men & Women), which is a combination of stem cell therapy and hormone replacement therapy. The combination results in a synergy between the two treatments to fight the illnesses caused by hormone imbalance, which could be the result of toxins, stress, and other natural factors.

Denver Regenerative Medicine also offers the unique AcCELLerate? Stem Cell regeneration system. It combines the patient's own stem cells and platelet rich plasma (PRP) for a combination of activated stem cells and platelets. This combination allows all of the growth factors from the PRP to immediately activate the stem cells. Patients who received this combination of stem cells and activated platelets noticed results about 30 percent faster compared to those who only received stem cells. Furthermore, the improvement was sustained over a longer period for the patients who received the AcCELLerate? Stem Cell therapy.

Those who are interested in stem cell therapy and the other therapies available at Denver Regenerative Medicine | Stem Cell Therapy, HRT, Testosterone Clinic may want to check out their website at <https://denverregenerativemedicine.com/>, or contact them on the telephone, or through email. They are open from 10:00 am to 6:00 pm on Mondays, and from 8:00 am to 6:00 pm, from Tuesday to Thursday.
