

Siding and Window Replacement Provider Remains Active During Lockdown

April 13, 2020

April 13, 2020 -

St. Louis, MO based Banner Construction is pleased to announce that they are factoring in all safety guidelines regarding the COVID-19 pandemic as they deliver their services. As the crisis progresses, the company will monitor all communication from health authorities in order to ensure that their response is always up to date with the latest news.

?At Banner Construction, the health and safety of our customers, employees and our affiliated business partners is our highest priority,? states the company. ?In response to the public health situation related to coronavirus (COVID-19), we are diligently monitoring updates from the Centers for Disease Control and Prevention (CDC), the World Health Organization (WHO) and medical professionals to ensure we are taking the necessary precautions to ensure your health and safety are always at the forefront of how we serve you.?

These precautions include eliminating all forms of physical contact and interaction between their staff and customers. For instance, by relying on digital methods of communication, the full scope of any given project

can be explored in complete safety, with customers and contractors using video conferencing software and so on to discuss all associated requirements. The company adds that their existing infrastructure for remote transactions also means that no customer will have to physically approach a member of their staff to either discuss or transfer payment. Each stage of the process, fortunately, can be handled electronically. The company clarifies, ?We can provide estimates and install siding without the need to enter your home and without the need for face to face contact.?

Certain measures will be taken behind the scenes as well, with Banner Construction coordinating with their employees to minimize in-person interaction as well as sterilize their tools at regular intervals. This has the additional benefit of ensuring that any materials, such as vinyl siding, brought onto a customer?s property will similarly be safe to handle. Even in the worst case scenarios, the company notes that homeowners simply have to remain indoors and/or avoid physically touching any new construction with their bare hands once it is complete.

Banner Construction primarily caters to homeowners who want to make the most of their homes? aesthetic and functional appeal. As the company observes, a home is one of the largest investments that anyone can make over the course of their lifetime, and investing in both its upkeep and longevity can greatly contribute to its market appeal in the future, should the property owner ever wish to sell it. In more immediate terms, however, the right construction project can cut down a family?s energy consumption and even eliminate the need for repetitive (and therefore costly) maintenance. Furthermore, a home?s appearance can speak volumes about its residents.

One way the company accomplishes this is by offering their customers access to James Hardie Siding, a brand of premium fiber cement siding that is in high demand due to its astonishing properties. A mixture of cement, sand and cellulose that is used as a building material in both residential and commercial properties, fiber cement siding has the distinct advantage of visually mimicking wood siding without having the same faults that the latter is known for. For instance, fiber cement siding is far more durable than traditional wood siding (it is not vulnerable to rot, mildew, termites etc.) and requires much less maintenance to help retain its integrity and aesthetic appeal. Notably, it can also be painted in virtually any colour, allowing for an extensive degree of customization.

Fiber cement siding can also effectively withstand the effects of rain, wind and hail, offering homes that have this material installed far more protection from the elements. Most notably, perhaps, the material is entirely noncombustible, which effectively means that it will not act as a fuel in the event a fire breaks out. James Hardie Siding in particular is America?s leading brand of fiber cement siding. As Banner Construction is a James Hardie Elite Preferred Contractor, their customers have the ability to choose from an extensive catalog of James Hardie products.

Interested parties are welcome to reach out to Jessica Benbow of Banner Construction to follow up on any further inquiries. More information can be found on their website as well.
