Arizona Solar Company Observes Social Distancing Practices During The COVID19 Pandemic

April 13, 2020

April 13, 2020 -

Mesa, Arizona based solar company Arizona Wholesale Solar would like to make their clients aware that the company is practicing safe social distancing during the COVID-19 pandemic. They are still open for business but will be implementing social distancing practices when installing solar systems at the homes of their clients. During this time, solar orders may be a bit backed up, but the company is working to ensure that all installations are completed as soon as Arizona Wholesale Solar can acquire the required components. The company, as part of their efforts to minimize human contact, is currently offering consultations with their customers over the phone and via video call.

The Arizona company takes pride in ensuring that their customers are educated well on the topic of solar energy and that they install only the best solar products on the market. Their services are becoming more and more popular among individuals and businesses alike. ?More businesses and homeowners are turning to solar energy than ever before,? the company says. ?With ongoing advances in solar energy technology, off-grid solar power systems are becoming increasingly attractive. By installing solar panels on your property, you can decrease your energy bills, reduce your carbon footprint and become less dependent on fossil fuel.?

Arizona Wholesale Solar designs, sells and constructs solar projects for residential properties in Maricopa County and the entire state of Arizona. The company boasts nearly a decade of experience in the renewable energy industry, being one of the top solar companies one can trust to design and install custom solar power systems for their property.

There are many reasons to install solar technology on one?s property. Solar is better for the environment and decreases the overall cost of living on a particular piece of property. It has also been proven that there is a link between solar and Arizona property value. This is due to the fact that many potential buyers are aware of the fact that solar technology leads to a substantial decrease in energy costs over time. Installing panels can be quite costly?but they are also usually worth this investment in the long run. Homes with solar energy often come with other features that the average buyer may not always take into consideration but will find quite valuable later on, such as heated floors. The value a high quality, well installed solar system adds to a house is something few people consider but also one that many more are gradually learning to take into account.

Those in the Phoenix, Arizona area in search of a solar company are encouraged to get in touch with Arizona Wholesale Solar for all their solar needs. The company regularly receives excellent reviews from many of their clients and would be more than happy to help homeowners and businesses get their solar panels installed.

?Working with Sonny from Arizona Wholesale Solar was the easiest and smoothest transition and transaction ever,? one 5-Star Google review of the company says. ?Sonny was referred to me by a friend and past client of the company. From the beginning, Sonny made everything smooth and seamless. He explained everything in simple terms, answered all of my questions and made the change/transition to solar hassle-free. He oversaw everything from start to finish, and he communicated every step of the way from the beginning until the end and answered my calls and emails promptly. Everything went according to schedule every step of the way, no hassles, no delays! It's been a pleasure doing business with Sonny and Arizona Wholesale Solar, and I highly recommend the company and the entire team for making this conversion so smooth and easy!?

Another client shares that, ?Sonny was so great to work with. He was thorough and responsive through a process that can be somewhat long. I would recommend working with Sonny if you are considering solar for your house. You won?t be disappointed!?

Arizona Wholesale Solar wishes all Phoenix residents the best during this crisis and will work to make getting solar installed on one?s property as safe and easy as possible.
