

Corrective Action Software Released by Qualitech Solutions

April 17, 2020

April 17, 2020 -

Qualitech Solutions, a company based in Charlotte, North Carolina, has announced that they are offering the BPI System CAPA Solution. This software is for automating and effectively managing the corrective and preventive action (CAPA) process and integration with other processes, such as policy development, document control, issue tracking, workflow management, auditing, and change control. It also enables a collaborative approach to quality management. More information about the company and its products can be gleaned by following their Facebook page.

Chris Sewell, owner, and CEO of Qualitech Solutions says, ?Our BPI System CAPA Solution is suitable for businesses who want to enhance their quality management processes. Performing CAPA is an essential and required part of ensuring and maintaining compliance with standards and regulations across the world. Having an effective CAPA management solution is essential when improving quality, but many companies are lacking in this particular area. The BPI System CAPA Solution is the best way to ensure that CAPA processes are completed properly and in a timely manner for the improvement of product quality and safety.?

The BPI System CAPA Solution has a number of features and benefits. These include automation of the

CAPA process; provision of a live dashboard; reporting; categorizing and trending; design and modification of workflows; and notifications and alerts. This system allows the automation of all CAPA related tasks, including follow-up, routing, and approval. It also includes alerting features to ensure team members are aware and engaged.

The BPI System also has a robust, real-time Dashboard that can be viewed through any browser, whether desktop or mobile. Through this Dashboard, users would be able to create new workflow records or finish pending assignments. It offers search functions, charts, and reports to find key information within the system. More information about Qualitech Solutions can be obtained by checking out their Linkedin page.

Meanwhile, ad-hoc reports are available to the users in various possible formats on the front dashboard. These reports can be configured to provide run-time filters to the end-user. It is also possible to schedule the automatic distribution of these reports at regular intervals.

Another feature of the BPI System CAPA Solution is that users can code, classify and categorize records and actions with the use of industry-standard drop-down menus or customer developed pick lists. And then by utilizing the built-in reporting and trending capabilities of the system, users can go to any code or category to identify and flag possible adverse or emerging trends. Mathematical calculations and charts can also be automatically generated.

The administrator of the system would also be able to construct and modify workflows graphically and design them in such a way that they are able to capture, process, and resolve items, depending on company business procedures and requirements. The Pre-Built and Low-Code Framework templates can be used to speed up the time needed to configure the workflows, with the possibility of adding an unlimited number of custom-designed fields. Business logic may then be integrated directly into the workflows, determining signatures, dynamic forms, future fields, requirements, and branching depending on individual field responses.

And finally, the system allows emails to be configured and then sent to various individuals, groups, and roles based on system and record level events, including but not limited to date extensions, task assignments, status changes, signature rejections, and more.

Qualitech Solutions was established in 1996 with the goal of providing organizations with control, visibility, accountability, and structure by merging external and internal business processes. These are provided through easy to use web-based platforms, boosting the team members? awareness and engagement while boosting the organization?s efficiency and profitability.

What makes Qualitech Solutions stand out from the crowd is that they don?t offer a one-size-fits-all solution. Instead, business users would be able to change and tailor-fit individual processes to match their present or future requirements. A process or procedure can be modified in just hours, rather than days, weeks, or longer.
