

Two New Bunion Relief Sets Released By DenadaDance

August 24, 2015

August 24, 2015 - PRESSADVANTAGE -

DenadaDance, a health and beauty company in Minden, NV, is happy to announce that they have released two new versions of bunion relief sets. The company has been providing a standard bunion relief product for some time now, but the new sets are more suitable for specific types of bunions and the associated pain. They want to ensure everyone is able to walk comfortably.

Elena Vera from DenadaDance says: "Our existing bunion relief product has long been very popular, but we felt that there is a need to address certain situations. While we will continue to provide this set to the market, we have now also added two other sets that have more specific applications."

The first new bunion pain relief product comes in a skin color, which makes it perfect for summer when people often want to wear sandals or other open-toed shoes. The tube toe separators have been designed to improve overall toe alignment. Furthermore, it comes with a bunion pad and toe spacer with two loops, which ensure that the product stays in place even when a person is running.

The second new bunion pain relief set has different toe spacers. The soft gel protectors and toe separators are designed to provide Hallux Valgus pain relief. The toe spacer has two loops that ensure the product stays in place at all times. They are particularly suitable for those who are recovering from bunion surgery as it also

helps to prevent a callus from forming.

"Bunions can be incredibly painful, as can the surgery to remove them," adds Elena Vera. "Our bunion relief sets are designed to ensure people are more comfortable while they are recovering. They will also stop new bunions and calluses from forming."

All three of the sets come in a standard size that will fit most feet, whether male or female. The products can be used throughout the day and night and can even be worn constantly. They also come with a 100% satisfaction guarantee. Meanwhile, customers are encouraged to consult their physicians about which type of toe spacers and tubes will be most suitable for their particular feet and bunion problem.
