Furnace Repair Calgary Announces New Air Conditioning Assessment and Installation Services

May 01, 2020

May 01, 2020 -
Furnace Repair Calgary, a well-respected in name in Canada, has announced that it is now offering in-home assessments and installation of air conditioning units. The company has been in business since 2011 and it is pleased that it can now offer not just heating but also air conditioning installation and associated services.

?We provide free in-home assessments,? said Matthew Hannigan, CEO of the company. ?During the inspection, we will design a custom solution that accounts for room size, airflow patterns, and home age in order to help you cool your home effectively with a central or ductless AC system.? The company handles all aspects of the air conditioner installation process, from the wiring and the duct installation down to the fitting of the AC unit itself.

Obviously, the choice of the unit itself by a homeowner is very important. It is critical to install the right AC system to maximize cooling effects for any home. If the unit is too big, it will consume too much energy. And, if it is too small, its power will be insufficient to properly maintain cooling levels.

?When clients work with Furnace Repair Calgary AB,? Mr. Hannigan continued, ?They can be secure in knowing that we?re a family-owned company who will do our utmost to make every transaction a good one for all concerned.?

The company covers Calgary and the surrounding area of Alberta. A representative will come in and talk with the property owner about their needs and will inspect the whole furnace system, and then they will come back with detailed options and pricing. The company prides itself on guaranteeing customers? satisfaction.

?People usually ask ?how big of a unit do I need??? Mr. Hannigan continued, ?the fact of the matter is that there is no set answer. We need to consider several factors to be able to size the equipment load. Window placement and size, construction, ceiling height, and many other variables must be considered in order to size the cooling and/or heating system properly. We will examine and calculate all of that. The foundation for having an effective system is a professionally done load calculation.?

Any Furnace Contractor which is truly professional will also offer regular maintenance and cleaning for heating and air conditioning systems as that is obviously a very important part of keeping an HVAC system running smoothly and efficiently. However, even with the proper steps being taken, there will come a time when the system will need to be replaced. When this happens, it is critical that a specialist company such as Furnace Repair Calgary be consulted.

Maggie Lawson is a customer of Furnace Repair Calgary. ?I live alone, and when my furnace had a problem in the middle of the night in the middle of winter, I had no idea what to do. I stumbled on their phone number and called them, and they were very helpful. They calmed me down, came out, assessed the problem in short order, and it was fixed the next day before noon. They will be putting in a cooling unit for me next month and I will never use any other company.?

There are some companies that steer clients into only using one or two ?favored? brand names because they get a commission for doing so. That is not the case with Furnace Repair Calgary. It offers a large choice of top brands and products for air conditioning such as Amana, Biosmart, Micropowerguard, RootX, Nature?s Miracle, ThinkSmart, Nuvo, PowerPipe, PowerVault, and Navien, among other renowned industry names.

Furnace Repair Calgary will handle all aspects of the air conditioner installation process, from the wiring and the duct installation down to the fitting of the AC. The company has an uncompromising commitment to quality service and will make every effort to perform a clean and smooth installation every time.
