

Revitalize You M.D. Reveals That Demand for Botox Remains Strong in Georgia

May 06, 2020

May 06, 2020 -

Revitalize You M.D., based in Roswell, Georgia, has revealed that even with all restrictions due to the Covid-19 crisis situation, the demand for Botox in the state of Georgia is still growing. Botox offers a way to minimize or get rid of aging lines and wrinkles, which are the major feature of the skin aging process. Ever since the US Food and Drug Administration (FDA) has approved the cosmetic use of botulinum toxin, it has become one of the most common minimally invasive procedures, with more than 3 million treatments being done annually. Meanwhile, Revitalize You M.D. ensures that they only utilize top quality injectables, such as Botox®.

Rachael Clark, a spokesperson for Revitalize You M.D., says, ?The world-famous botulinum toxin has been developed to treat moderate to severe frown lines. But that?s not all what Botox is good for. At Revitalize You MD, we administer Botox treatments to improve hyperhidrosis or severe underarm sweating. We inject 50 units of Botox in each armpit to paralyze these overactive sweat glands, which cause you to start sweating less as a result.?

Among the FDA approved products for treating wrinkles, the neuromodulators Botox® and Dysport® are for the purpose of minimizing or getting rid of the lines between the eyebrows, on the forehead, and around eyes through the relaxation of the muscles that cause the development of dynamic and static lines or wrinkles. Thus, the three most popular and medical uses of Botox® are for treating forehead lines, crow?s feet lines, and frown lines. In addition, it can also be used for treating migraines and hyperhidrosis, which is excessive sweating of the hands, underarms, or feet. Those who would like to learn more about Revitalize You M.D. may want to check out their Instagram page.

Treatment with Botox results in the gradual relaxation of the muscles, allowing the overlaying skin to look smooth and without wrinkles. Either provided alone or in combination with other facial rejuvenation treatments, people can experience a significant enhancement in their appearance. An important advantage is that sedation or anesthesia is not required, and there is no recovery period that will prevent people from returning to work immediately. The results will become noticeable within three to seven days, and the effect of the treatment will usually last for about four to six months.

Revitalize You M.D. also offers other anti-aging treatments, aside from Botox. These are the hormone replacement therapy, IV therapy, and weight loss programs. Hormone replacement therapy is used to counteract the hormone imbalance that men and women alike experience as they age. For instance, when men reach the ages of 40 to 55, they start to experience a decline in their testosterone levels, which is known as andropause. Andropause has a number of symptoms, including increased fatigue, reduced energy levels, low sex drive, decreased strength and muscle mass, depression, lack of mental focus, and erectile dysfunction. Men?s testosterone therapy is available at Revitalize You M.D. for andropause.

For women, the hormonal imbalance problems can occur from their late 30s and beyond. Symptoms include foggy memory, persistent weight gains, muscle loss, unexpected and excessive sweating vaginal dryness, consistent and growing fatigue, and lack of sexual desire. Hormone replacement therapy for women differs from that of men because of the symptoms, which means that that the timing and the treatments will differ.

Intravenous (IV) therapy is another treatment used to counteract the effects of aging. This offers a way to feed vitamins, minerals, and amino acids directly into the patient?s bloodstream to treat intracellular nutrient deficiencies. An important advantage of IV therapy is that it bypasses the gastrointestinal (GI) tract and the nutrients go directly into the system. Oral administration of the nutrients is much slower because they have to go through the GI system first before the nutrients can get into the bloodstream.

Those who are interested in Botox and other cosmetic treatments offered by Revitalize You M.D. may want to
