IPSOFACTO IT Services Can Help Stop Hackers During Covid19

June 29, 2020

June 29, 2020 -
IPSOFACTO IT Services, a San Francisco, California-based IT support firm has announced that they can help stop hackers during the Covid19 crisis when cyber criminals are trying to take advantage of the situation and the weaknesses of networks. They can help provide the necessary protection against phishing scams related to the Corona virus. Fortunately, they have the experience and services to help prevent such crimes from occurring and keep the business and its personal data safe.

Steve Boullianne, CEO of the San Francisco IT company, explains, ?The Covid19 crisis has provided an opportunity for hackers and Internet cyber crime to increase significantly. It's important to protect your business and website against hackers who are looking to take advantage of network weaknesses. It's also a time to protect yourself against phishing scams related to the Corona Virus. Cyber criminals are looking to break into networks and take advantage of those who don't have the security or the knowledge to prevent their advances. We have the experience and services to help prevent these crimes and keep you, your business, and your personal data safe.?

The company is a leading provider of IT support services for all industries across the USA, particularly when

it comes to IT, network security, Meraki WIFI, Microsoft Azure, and many more. The services provided by IPSOFACTO IT Services include startup IT, technology consultants, network support, network management, churn IT/help desk, server administration, outsourced CTO and CIO services, employee onboarding and offboarding, employee turnover services, tech integration, desktop support, and computer management.

Steve Boullianne wants to emphasize that running IT security for a whole company is much like running a marathon. While it is not impossible, it is certainly not an easy task. It requires protecting many assets, employees, and data. An effective method of protecting data and personal information is by moving to cloud services, which can protect the network from illegal access by hackers and attackers.

The company has been able to establish a reputation of being a leading IT firm in San Francisco for more than 20 years because of its exemplary services. They have been ensuring that companies in the Bay Area are well served when it comes to network maintenance and security, while making sure that operations are efficient. They have also opened the OpenDNS Retailer in San Francisco, which offers Domain Name System Services and web solutions for a wide range of businesses. It provides a dependable and faster protection service compared to other provider. It makes use of a cloud-based security solution that can help businesses establish a safer connection with their clients.

Some of the features provided by the OpenDNS Retailer services include: layered DNS security; malware and antivirus protection; web filtering; real-time onset and offset network protection; and Active Directory integration. There are a number of benefits from the security services provided by IPSOFACTO IT Services. First of all, hackers are unable to get through because anyone trying to harm the business cannot gain entry. Second, the personal data will get protected. Business owners would have peace of mind in the knowledge that outsiders will not be able to access business? information, including clients? data. Third, they offer protection for private networks by shutting them off from the Internet, keeping them safe from virus or unauthorized users. Fourth, any information shared between computers is also protected.

IPSOFACTO IT Services has been delivering quality technical guidance to small, medium and large business, VC?s, non-profit organizations, and government for more than 22 years. To ensure reliable services, they have also established strategic partnerships with companies like Microsoft, Google, Lenovo, Apple, Cloud, Meraki, and more.

Those who are interested in San Francisco IT support services may want to check out the website of IPSOFACTO IT Services, or contact them on the phone, or through email. They are open from 7:30 am to 10:00 pm, from Monday to Sunday. However, it is essential to contact them first before going to their office because hours or services may vary due to the Covid19 situation.
