

Bio Clean of Utah Reports on Park City Water Damage Cleanup Project

May 15, 2020

May 15, 2020 - PRESSADVANTAGE -

Bio Clean of Utah, which is based in Centerville, Utah, has reported on a water damage cleanup project that they handled in Park City, Utah. The water damage was the result of a water leak from a sprinkler system in a local business. Luckily, only a small area got wet and most of the damage consisted of ruined merchandise on the shelves below the leak. Total cost of the damaged merchandise was estimated at \$4,000. Bio Clean of Utah provides cleanup services and one of these is water damage cleanup. More about their water damage cleanup services can be gleaned from <https://www.biocleanofutah.com/park-city-water-damage-cleanup/>.

Daryl Olsen, President of Bio Clean of Utah, says, "No one expects water damage in their property. It happens all of a sudden and leaves your house or business with some irrecoverable damage. But, all is not lost if you call Bio Clean of Utah. We are an expert water damage cleanup company servicing in Park City and all of northern Utah. Water damage can leave your home or business in a mess. Our advice is, don't do anything. Let us handle the mess to minimize to damage as much as possible."

He continues, "In our recent water damage cleanup job, a local business suffered from some ruined merchandise due to a leak from their sprinkler system. It was fortunate that only a small area was affected."

But aside from the damage caused by water on various items, such as merchandise, there is the possibility of mold growth, which is why any kind of water damage should be attended to as early as possible and also why we offer mold inspection and mold removal services.?

When there is water damage in a property, the first thing that the professionals from Bio Clean of Utah will do is to remove the water. Whether it is a flooded basement or knee-deep water, they will find a way to get rid of the water to prevent it from causing more problems. This will be done with pumps and machines to quickly remove the water. It is never a good idea to have standing water in a property for an extended period of time because various kinds of pests can affect the health of people living in the property, aside from the possibility of mold growth.

The team will also look for signs of mold growth and if any are found, they will clean them immediately. They will utilize removal solutions to eliminate the mold and ensure that they don't come back. After removing the water and molds, they will focus on bringing back the room to its normal condition. This includes drying up the moist areas and reorganizing the fixtures and furniture. When drying the area, they will also try to minimize the damage by removing any affected materials before they begin the drying process.

Mold inspection, testing and removal are important services provided by Bio Clean of Utah because molds produce mycotoxins and spores that can irritate the respiratory system of certain individuals. Mycotoxins are produced by various toxic molds, such as black mold, and these substances can affect cell structures and processes, resulting into serious health problems, such pulmonary hemorrhage or pulmonary hemosiderosis, nose bleeds, headaches and other flu-like symptoms, dermatitis, sore throat, diarrhea, depression, chronic fatigue, hair loss, and immune system suppression.

Through mold testing, the professionals from Bio Clean of Utah can determine the quantity and varieties of mold in the air. This will allow them to establish the scope of work that will be required for a particular property. Mold cleanup is done through a number of steps. First is containment, which prevents the mold spores from spreading the area where they are present. Next is removal, which involves getting rid of contaminated materials, vacuuming, sanding, and cleaning. Then, they will apply fungicides to the contaminated areas. And finally, they will apply some anti-microbial coating to prevent the mold from coming back.

Property owners who are interested in water damage cleanup and other services offered by Bio Clean of Utah can visit their website at <https://www.biocleanofutah.com/>, or contact them on the telephone or through email.
