

## **Bio Clean of Utah Hired for Park City Utah Mold Removal Job**

*May 20, 2020*

May 20, 2020 - PRESSADVANTAGE -

Bio Clean of Utah, a company based in Centerville, Utah, has announced that they have been hired for a mold removal project for a home in Park City, Utah. The property is a new home but construction defects had resulted in a leaking roof that in turn allowed mold to grow on the walls. The family members had experienced health problems after moving into the home. The builder had hired Bio Clean of Utah to remove the mold and start the cleanup process while the builder will take care of the final repairs. More about the Bio Clean of Utah water damage cleanup services can be gleaned from <https://www.biocleanofutah.com/park-city-mold-removal/>.

Daryl Olsen, President of Bio Clean of Utah, says, "For those who own a home or business in Park City, while it may not be a daily thought, it is important to consider the possibility of mold in your property. If you have not considered this scenario, it is time you do so. It is essential that you examine your home or business for any evidence of mold. In fact, it is actually best to contact a Park City mold inspector for a thorough examination. If you or your professional mold inspector find evidence of mold in the home or business, it is essential to have the problem fixed as soon as possible. This is done through a process of mold removal in the home or business."

He continues, "The mold removal project that we were hired to do recently shows how important it is getting rid of mold in the home or any property. Molds release allergens and possible toxic substances that can cause health problems. The process of mold removal is a dangerous and difficult situation, which is why it is advisable for any home or business to have it professionally removed."

Black mold and other toxic molds produce mycotoxins, which are toxic chemicals that can interfere with cell structures and processes and may cause serious health problems in people. Mycotoxins have been observed to be present indoors with people suffering from various health issues, such as pulmonary hemorrhage or pulmonary hemosiderosis, nose bleeds, hair loss, headaches and other flu-like symptoms, immune system suppression, diarrhea, psychological depression, chronic fatigue, dermatitis, and sore throat. Other symptoms that have been found to be related with mold include burning eyes, chest pains, respiratory illness, blurred vision, dry cough, wheezing, aggravated asthma, chest tightness, cognitive disorder, and nasal congestion.

Homeowners who believe mold is present in their property are advised to request for a mold inspection. For a nominal fee, professionals from Bio Clean of Utah can go to the site and conduct an inspection, taking into account the history of the property, the moisture source, current dampness, suspected affected areas, and affected materials. These professionals have the appropriate experience and the equipment and tools for detecting and searching for mold in the property.

They offer mold testing for determining the quantity and varieties of mold that are present in the air. The information they get from mold testing can also be used for documenting the presence of mold in the home.

After the presence of mold has been ascertained, the professionals from Bio Clean of Utah will start the mold cleanup process. First of all, they will ensure containment, which ensures that the mold spores don't spread to other areas of the home. The next step is mold removal, which entails eliminating contaminated materials, vacuuming, sanding, and cleaning. Next, they will apply fungicides to those places that have been found to be contaminated with mold. And lastly, the professionals will apply anti-microbial coating on the various surfaces as a way to prevent the mold from returning. Throughout the remediation process, the professionals from Bio Clean of Utah will wear the proper personal protective gear.

Homeowners and other property owners who are interested in the mold removal and other services provided by Bio Clean of Utah may want to check out their website at <https://www.biocleanofutah.com/>, or contact them through the telephone or via email.
