

## **Mr. Chem-Dry Stresses Importance of Regular Professional Layton Utah Carpet Cleaning**

*May 15, 2020*

May 15, 2020 - PRESSADVANTAGE -

Mr. Chem-Dry, a professional cleaning services company based in Centerville, Utah, has stressed the importance of regular professional carpet cleaning in Layton, Utah. The advantages of having regular professional carpet cleaning services performed for the home or office include the ability to restore the visual appeal of the carpet; elimination of 89 percent of airborne bacteria; assurance that 98 percent of the allergens stuck to the carpet will be removed; increased lifespan of the carpet; feeling of having a brand new carpet; and savings from not having to replace the carpet frequently. More about their carpet cleaning services in Layton can be gleaned from <https://www.mrchemdry.com/carpet-cleaning-layton-utah.html>.

Daryl Olsen, President of Mr. Chem-Dry, says, "While we are not the only carpet cleaning service in Layton Utah, we do offer the highest quality carpet cleaning at the most competitive prices. However, it's not only our passion and dedication to keep clients happy that sets us apart from the competition. We also make use of the Chem-Dry method for getting your carpets clean. And if you are not familiar with the Chem-Dry method, this is what you should know. It uses hot carbonating extraction, it is incredibly safe, it uses less water, it can be used for other surfaces, and the carpet can be dry and usable in a few hours."

The Chem-Dry method utilizes a proprietary approach to carpet cleaning, which is hot carbonating extraction. This process avoids the use of soaps or detergents but is capable of getting rid of 98 percent of allergens and 89 percent of airborne bacteria. And because no soaps or detergents are used, the process is considered to be non-toxic and completely safe for the whole family, including pets. It is also environmentally friendly because it requires 80 percent less water, compared to steam cleaning. The Chem-Dry process can also be utilized for cleaning upholstery, rugs, grout, and tiles.

It should be pointed out that the Chem-Dry process is a green cleaning method because it makes use of 80 percent less water than the conventional method of steam cleaning. And instead of waiting for the carpet to dry for a number of days, the carpet gets dry in just a few hours. This fast drying speed is also beneficial because there is less likelihood of mold growth in the carpet backing or under the carpet. The hot carbonating extraction process is effective because it is able to get the dirt that is hidden in the carpet's fibers. This is because it lifts the dirt and whisks it away. Furthermore, they use a PowerHead Machine® to achieve a really clean carpet. And the cleaning solution that they use has been Green Certified.

Another important service provided by Mr. Chem-Dry is granite countertop restoration. Granite countertops are usually preferred by some homeowners because they're both durable and attractive. They are also unique because no two pieces of granite are exactly the same. However, while a granite countertop can be expected to last for a long time, it is porous and water could seep in and ruin its appearance.

New granite countertops are sealed when they are first installed to prevent water from getting into the pores of the granite. As the years go by, this sealant gets thinner until such time that liquids spilled onto the countertop are able to seep down into the porous granite. Over time, bacteria, dirt, water spots, and residue make the granite surface less attractive. The cleaning solution that they use is environmentally friendly and contains no harsh chemicals. They first apply a residue remover to restore the granite to its original color. Next, they apply a sealer that penetrates deep into the granite surface. After the sealer has dried, they polish the countertop making it look like brand new.

Homeowners and other property owners who are interested in carpet cleaning and other services offered by Mr. Chem-Dry can check out their website at <https://www.mrchemdry.com/>, or contact them on the telephone or through email.
