

## **Mr. Chem-Dry Offers Carpet Cleaning in Farmington Utah**

*May 22, 2020*

May 22, 2020 - PRESSADVANTAGE -

Mr. Chem-Dry, a professional cleaning services company based in Centerville, Utah, has announced that they are offering carpet cleaning services in Farmington, Utah and nearby areas. Homeowners with carpets know how difficult it can be to keep them clean, attractive, and smelling great. The bad smell that comes from carpets is not just irritating to the nose, it is also indicative of the presence of pollutants, dirt, dust, mites, and even mold or mildew, which are all potentially harmful to the health of family members. More about the carpet cleaning services offered in Farmington can be gleaned from <https://www.mrchemdry.com/carpet-cleaning-farmington-utah.html>.

Daryl Olsen, President of Mr. Chem-Dry, says, "A significant benefit that can be gained from investing in our professional carpet cleaning services is the ability to completely eliminate trapped pollutants that might be causing issues with the air quality in your home. Carpets can really ruin the air quality in your home because the pollutants can be kicked up and distributed throughout your air. As a result, if you are not cleaning your carpets regularly, you could be causing allergic reactions and other kinds of issues with everyone in your home. This is especially true if you have people living in your home that might have asthma or other kinds of respiratory health issues already."

There are three basic benefits of having the carpet cleaned professionally. First of all, they can totally get rid of trapped dirt, dust, and other pollutants in the carpet, which could be degrading the air quality in the home because they get airborne every time someone steps on the carpet. If the carpet is not being cleaned regularly, the accumulated dust, dirt, and other pollutants are lifted into air, possibly causing allergic reactions to people who are vulnerable, including those with asthma and those who have some kind of respiratory illness.

The second advantage of having the carpet cleaned regularly by a professional cleaning service is that this will prevent mold growth. Carpets have the tendency to harbor mold especially in humid climates. Moisture could get into the carpet through spills and this could serve as a breeding ground for mold and bacteria. When carpets are cleaned, the moisture from spills and other sources also get removed, thus minimizing the possibility of mold growth in the carpet.

The third benefit is that cleaning the carpet results into a much better appearance of the carpet and the home. This will also likely make the people living the home feel better. And because the proprietary carpet cleaning method that they use is safe and non-toxic, there is less risk of the family members getting sick as a result of the cleaning chemicals used.

It should be noted that Mr. Chem-Dry ensures that they are able to offer green cleaning in Farmington and other areas in Utah like Davis, Salt Lake, and Weber Counties. First of all, they don't use soaps, detergents, phosphates, surfactants, organic solvents, fragrances, petroleum-based materials, and other harsh chemicals because these can pollute the air, forests, and the various bodies of water like streams, lakes, and rivers. They use The Natural® cleaning solution, which is an innovative mixture of effective ingredients. It should also be noted that their green cleaning method is far better than steam cleaning. When steam cleaning the carpet, the carpet absorbs a lot of water and it will usually take days for the carpeting to get dry. Additionally, while the carpet is still wet, it can harbor mold, which can multiply fast when there is moisture.

Mr. Chem-Dry offers other cleaning services, such as granite countertop restoration, pet urine removal, rug cleaning, tile cleaning, upholstery cleaning, and water damage cleanup. Pet urine removal is essential for homes with pets. Homeowners with pets know that pet urine on chairs, carpets, upholstery and other places in the home have a strong odor. Cleaning, rubbing, soaking, dousing or other techniques are not able to remove the urine odor. But with the Chem-Dry hot carbonated extraction method, the pet urine trapped in the carpet fibers can be removed.
