Joliet HVAC Services Company Stresses the Role of Air Filtering in Preventing Covid 19

May 21, 2020

May 21, 2020 -

Leipart Heating & Cooling, based in Joliet, Illinois, has stressed the importance of having the right kind of air filtering for HVAC systems in the home or in any building as a way to prevent Covid 19. There are many kinds of air filters and some may not be capable of filtering out the coronavirus. This is why it is vital to get the services of a professional HVAC repair company to check on the air filtering of the HVAC system to minimize the risks of getting Covid 19. Furthermore, it is important to assume that air filters in the home or building contain active microbiological material. It is therefore also a good idea for homeowners and other property owners not to do the air filter replacement themselves but to entrust this task to the professionals who know the risks involved and how to properly handle a used air filter.

Jim Leipart from Leipart Heating & Cooling says, ?At Leipart Heating & Air Conditioning, we are committed to meeting and exceeding your needs when it comes to the comfort and quality of the air in your home or business, especially during this time when the Covid 19 pandemic threatens our health and our lives. Having the right air filters in your home or building is essential. You can trust our team of expert, EPA-certified HVAC technicians to give you honest advice, provide accurate estimates for work, and get the job done right the first time. Give us a call today to make us your HVAC contractor in Chicago and experience

our award-winning customer service yourself.?

The core maintenance services that Leipart Heating & Cooling offers include air conditioning maintenance, maintenance of heating systems, maintenance of home comfort systems, home performance checking, indoor air quality checking, attic insulation maintenance, and air duct maintenance.

Meanwhile, the company also offers air conditioning (AC) repair and installation services that people can afford. They want to point out that buying a cooling system for a home can be quite costly and it is therefore important to choose the appropriate AC equipment and make sure that it is properly installed the first time. Choosing the wrong size or getting a low quality model may result in more expenses down the line plus a lot of headaches. Buying the least expensive model could be a costly error. It should be noted that the lower priced models are likely to be the least efficient, which means they consume much more energy and thus will result in higher monthly electricity bills. The suggestion is to find an AC supplier that has a good reputation on cost and quality savings.

Choosing the appropriate AC equipment is just half of the challenge. It is also a good practice to ensure that the HVAC installation is done properly for any AC unit. Even if the AC unit is of high quality, it may perform poorly if it is not installed correctly.

Leipart Heating & Cooling helps building owners maintain good air quality through sufficient ventilation with filtration to provide thermal comfort to building occupants. An important component of HVAC systems are heat exchangers, which are also called thermal switch exchangers. There are two types of heat exchangers used in the HVAC industry. Gas model plate exchangers are used internally for HVAC equipment like refrigerators and air conditioning units. On the other hand, Brazetek exchangers have a few tubes that contain the actual fluid heat exchangers and/or gas based on the kind of cooling device. Brazetek exchangers are made of materials such as alloys with aluminum. These types of HVAC equipment can be fundamental and are the simplest requirements in HVAC systems. They are of various types, such as tube or shell, pillow plate, plate, plate fin, plus fluid heat transfer systems and exchange plates.

Homeowners and other property owners who are interested in Joliet AC repair services may want to check out the Leipart Heating & Cooling website, or contact them on the phone, or through email.
