

# **ARM Energy Solutions: Every Santa Rosa Resident Needs A GENERAC Power Generator**

*June 10, 2020*

June 10, 2020 - PRESSADVANTAGE -

Santa Rosa, California based ARM Energy Solutions is reaching out to the wider community to explain why everyone in Santa Rosa needs a GENERAC Power Generator. For over 25 years, ARM Energy Solutions has provided a variety of energy solutions, such as heating and cooling, solar panels and battery back and generators and more to their clients. They hope that sharing their expertise will help more local residents realise how they can prepare better for emergency situations.

According to the company, the GENERAC power generator is gaining popularity throughout Santa Rosa, Sonoma County and the surrounding areas. It is a great alternative to a battery storage solution, making it a must-have for all PG&E customers. In fact, according to ARM Energy Solutions, it is fast becoming a necessity due to changing weather patterns and high fire danger. As the company explains, it is especially necessary for people who live in the country and need their well, water and sewer to work as they are not on the city grid. Having a GENERAC power generator will also ensure that the lights, TV, AC and refrigerator will stay on.

Alan McGovern, President of ARM Energy Solutions, says, "I saw the writing on the wall with the fires and knew that this is something that would be needed in the area. If there are natural disasters of any kind, PG&E want to do a shut off. They shut everybody's power off and people don't like it. The big driving force for the need for a generator is PG&E shutting off power when there is high fire danger. Even when winds get to a certain speed, they want to shut it off in high danger areas. Having a power generator will keep you safe when this happens."

The company explains that they chose GENERAC because they are the best name in the industry. They are known for their reliability as well as their dependability and have a broad product lineup. They also offer the best support. As ARM Energy Solutions states, power outages aren't a 9-to-5 phenomenon, which means that homeowners rarely (if ever) know when they will need assistance. However, with GENERAC,

homeowners do not have to worry?GENERAC employs a 24/7 support team.

GENERAC Home Backup Generators take over the moment they sense a power outage, turning on automatically and delivering backup power to a home. The generator will run until utility power returns, whether that is two hours or two weeks. Whatever the reason for the loss of utility power, be it a storm or equipment failure, the GENERAC generator is able to detect it and prepare to restore a home's power. The generator is engineered to be able to get up to speed and generate electricity within seconds. Once it is up to speed, the automatic transfer switch will send the generator power to the home. The generator will stay active until utility power returns.

Those interested in learning more about GENERAC generators or purchasing one are welcome to contact ARM Energy solutions for a free consultation. The company explains that the first step is to evaluate the property and make sure that they size the generator correctly so it will be able to support the house and all its power needs. Furthermore, homeowners can choose to get a backup power generator for a specific area of the home or the whole house. GENERAC has a broad range of products, and they are considered the most cost-effective on the market. ARM Energy Solutions explains that installation costs will vary by system size, installation considerations and local building codes. However, the company assures their customers that they offer a number of financing options that can help.

Those who want to learn more about ARM Energy Solutions, their services and their generators are welcome to visit the following link to learn more: GENERAC Power Generator Santa Rosa. Additionally, they encourage interested parties to get in touch with Alan McGovern directly via email or phone. The company can also be reached through the contact form on their website. ARM Energy Solutions maintains a presence on Facebook where they frequently post updates, share media and communicate with their clients.
