

Capel Concrete Making Changes That Will Keep Them Among the Biggest and the Best Charlotte Concrete Contractors

June 29, 2020

June 29, 2020 -

Due to an overwhelming demand for their Charlotte and surrounding area cement finishing and masonry services, Capel Concrete is proud to announce they have been adding new employees, new equipment, updated technology, and upgraded materials to their operations. All this was done to meet the additional demand for their products in the Charlotte area while at the same time making sure the company maintained its standing as one of the best in the local concrete finishing industry. Many of the changes that have been mentioned here can be read about on the company's website here at <http://www.capelconcrete.com/>.

Company owner, Arthur Capel, had this to say about these recent changes, "For decades now Charlotte and the surrounding areas have been some of the fastest-growing places in America. That has created an unusually high demand for concrete finishing services like ours. We love the thought of taking on the additional work that will be coming our way in new areas but we also want to handle this work the right way. That's why we have made a significant investment in personnel, equipment, and technology. It's the only way we felt that we handle getting this additional workload done in a timely and completely seamless manner. We are a concrete contractor that has built our stellar reputation based on quality work and excellent

customer service, that is something we will never compromise on no matter how much additional work we are asked to do.?

According to Capel, among the areas they are now doing more work in include Huntersville, North Carolina, and Fort Mill, South Carolina. He also added that their service territory now covers the entire Greater Charlotte area including its southernmost points. The owner says that those in his company are very proud of their efforts in their new and existing service areas. That's why they like to place many photos of their completed concrete jobs on their Instagram page.

He went on to say that the new equipment and technology they are using will be especially beneficial when doing their large size commercial projects. This includes the sidewalk and curbing jobs that the company often does in conjunction with one another. Capel says that it's imperative to have the know-how and equipment to get these jobs done the right way because they are so important to the aesthetics of any commercial property. He mentioned that they will also be able to pour and finish their commercial concrete wall projects faster and more efficiently without sacrificing any of the quality work they are known for. According to Capel, the large size commercial slabs and footings that they pour and finish will also go much smoother thanks to the new equipment and extra personnel.

Residential customers should also greatly benefit from the changes and additions that the company has made. He stated that with improved technologies and equipment they are now able to do such things as adding more customization to their home driveway projects. He says that as of now there is virtually no shape or curve to the outside of a concrete driveway that they can't frame up and pour. The same holds true for concrete sidewalks too. It will also help them meet the increased demand for their popular residential concrete patio and home hardscape services. Capel also mentioned that they have even added more paver and masonry wall installation crews. He says that this will enable them to better serve those customers who prefer the looks of these landscape features over their concrete alternatives.

Capel Concrete currently serves such Greater Charlotte communities as the Davidson, Mooresville, Huntersville, Cornelius, Concord, and Kannapolis areas of North Carolina. Those who wish to have more information on this progressive Charlotte area concrete contractor's services, can call them, send them an email, or fill out the contact form on their website. Capel says that their Facebook page is also full of information on the company's services and has many photos of the concrete jobs they have completed.
