Apex Pest Control Offers Professional Wasp Nest Removal In Barnsley

June 22, 2020

June 22, 2020 -
Barnsley, England based Apex Pest Control, a company known for providing domestic and commercial as well as agriculture and forestry pest control services, is pleased to offer their professional wasp nest removal services to customers in Barnsley and the surrounding areas.

As noted on the company?s website, warm weather leads to the resurfacing of wasps and other irritating pests. Although this phenomenon is somewhat normal and happens every year, wasps pose a danger to everyone?s health and safety. Due to this reason, Apex Pest Control asserts that it is necessary for homeowners to make prompt, informed decisions when it comes to wasp nest removal.

The company explains that wasps typically stay in their corner and do not really bother humans but once they are meddled with, these pests become aggressive and start attacking and stinging those who enter their territory. As such, removing a wasp?s nest without the help of a professional exterminator can prove to be dangerous because one wrong move can trigger the entire fleet of wasps to attack.

To help raise awareness of this issue, Apex Pest Control has published a blog post that sheds light on the truth behind some common myths around wasp nest removal. As noted in the article, some homeowners believe that removing wasp nests at night is easier and more effective. However, even though it is true that wasps retire to their homes at dusk and stay there the entire night, this does not mean that it is completely safe to attempt their removal at this time. When removing nests at night, Apex Pest Control recommends using a bright light in order to see the nest properly. However, they warn homeowners that using bright lights or any other shiny object can alert the wasps and make them aggressive within the blink of an eye.

In addition, the post also reminds everyone that wasps inject venom into the skin when they sting. Unlike bees that sting only once, wasps can attack and sting the victim multiple times, which can be very dangerous?especially for people who have allergies. Moreover, there is also a myth that says putting artificial

nests in the garden can keep wasps at bay, but Apex Pest Control points out that this is not true because some wasps actually build their nests next to other wasp nests.

While many myths are currently in circulation regarding wasp nest removal, the company asserts that most of them are not true and can only lead homeowners into taking actions that will result in dangerous encounters with wasps. Apex Pest Control firmly states that wasp nest removal is not a DIY project and that the best thing to do is seek professional help from those who are trained to properly eradicate wasp nests without endangering anyone.

Tony Johnson, owner of Apex Pest Control, says, ?We help our clients remove wasp nests in their homes and businesses in the most systematic and timely manner. We do this on a daily basis, and we are accustomed to treating and safely removing wasp nests. Our team of technicians are trained to deal with all types of wasps and only use high quality and environmental-friendly products. Please do not hesitate to give us a call or send us an email to learn more about our services. Our friendly customer service representatives will be happy to assist you and answer all of your questions.?

Johnson also states that the company gives utmost importance to the safety of their customers. In fact, along with using protective gear, Apex Pest Control takes every possible measure to keep homeowners and their pets at a safe distance at all times of the operation. They also utilize the appropriate chemicals and equipment, the precise selection of which depends on the type of pest that needs to be eradicated.

Apex Pest Control is a local exterminator that has been providing affordable quality pest control services across Sheffield, Leeds, Barnsley, Rotherham and North Derbyshire since 2016. The veterans at Apex Pest Control have delivered excellent services for years, eliminating all pest issues while maintaining a high degree of customer satisfaction.
