

Udemy Training Launched On How To Take Underwater iPhone Photographs

September 08, 2015

September 08, 2015 - PRESSADVANTAGE -

Playtime Gadgets, a business in Austin, TX, has announced the launch of their Udemy training for iPhone photography. This training has been designed to teach people how to get the most out of their iPhone in terms of photography. The course specifically looks at how to create underwater photographs, which can be achieved together with the waterproof smartphone case that Playtime Gadgets has developed.

Daniel Hall from Playtime Gadgets says: "People are using their iPhone or smartphone predominantly to capture images for their social media stream. Knowing how to use a smartphone in places that other people forget about, like taking photographs underwater, is a great way to take really standout social media pictures. The Udemy training shows how to achieve that."

Photography experts agree that using background and natural environments that are out of the norm allow for photographs that people don't expect. Such backgrounds and environments include underwater, wet conditions or inclement weather. The training provided shows people exactly how to achieve that. Not only does it teach people how to choose the right environment for their social media photographs, but also how to make sure the picture looks amazing.

"Taking underwater photographs is something that was always out of people's reach," adds Daniel Hall. "The only people who could do it were those with a lot of money, enabling them to purchase the expensive equipment needed for this type of photography. Fortunately, people can now use the gadget they all have, which is their smartphone, and simply place it in a specifically designed underwater case. Put together with the knowledge obtained from the Udemy course, the photographs will look nothing short of professional."

Underwater photography is something that captivates people. It gives them a glimpse to a world that may be present on our own planet, but that is effectively completely alien to us. All marine life, plant and animal alike, are different in how they function compared to those on dry land. As such, it feels like being allowed entry into a completely different world, even if it is just for a short period of time. Taking great underwater photographs, therefore, is a surefire way to create social media pictures that people will love and remember.
