

Metro Laser CoolSculpting MedSpa Enacts Careful Check-in Process to Keep Patients Safe from COVID

August 24, 2020

August 24, 2020 - PRESSADVANTAGE -

Metro Laser CoolSculpting MedSpa has announced that they have recently enacted a careful check-in process to ensure that they can safely treat patients during the COVID pandemic. They have recently published a blog post that contains a video that shows what they're doing to help keep patients safe during check-in. First of all, all of their technicians wear an ASTM Level 3 mask as well as a polycarbonate face shield in order to comply with the highest standards of safety.

Daniel James, an outside PR spokesperson for Metro Laser CoolSculpting MedSpa, says, "While there are always risks of exposure during this time, Metro [Laser] takes patient health extremely seriously and are following the highest standards. They want to continue providing patients the great experience they've come to love at all 3 Metro Laser locations while ensuring both staff and patients stay as safe as possible. We're all in this together."

The new check-in process begins with a self-service digital temperature check at the lobby. The patient simply walks up to the screen and it will measure and display the body temperature. The next step would be for the patient to inform them that he or she is there. A technician will come down to meet the patient once they are ready for the patient.

On the way up, the patient will be asked some questions about the patient's recent activities and health. This will include any recent possibility of COVID exposure, recent travel, recent symptoms or fever, and self-quarantining. Next, they will double check the patient's temperature and note this down for their records. They will then lead the patient in, opening all doors for the patient to minimize contact. Next, the patient will be provided with a hand sanitizer before starting the treatment. And the patient will need to sign a brief COVID release form.

Metro Laser CoolSculpting MedSpa offers various kinds of aesthetic services and fat management medical treatments, such as CoolSculpting. This treatment makes use of cryolipolysis to effectively and safely freeze away exercise- and diet-resistant fat without causing damage to nearby cells. It has several important

advantages, such as the fact that it: is FDA-approved; targets and eliminates stubborn fat; has proven, noticeable, and lasting results; requires no surgery - 100% non-invasive procedure; and requires no downtime - return to work and normal activities immediately after treatment. While all cells can be damaged or destroyed when exposed to cold temperatures, the cells in fat tissue are very vulnerable to a very specific set of temperatures. Thus, by using controlled application of targeted cold temperatures, the fat cells can be destroyed without causing harm to the surrounding cells, such as skin or muscle. A study published in the Aesthetic Surgery Journal showed that CoolSculpting can be used to effectively decrease subcutaneous fat volume.

The medical spa also offers clinical grade skin and face treatments for non-surgical approaches to reducing or eliminating fine line, wrinkle spots, scars, and other skin issues. Combined with their injectible filler and botox capabilities as well as laser skin rejuvenation devices, Metro Laser is a comprehensive resource for anti-aging enthusiasts.

Metro Laser CoolSculpting MedSpa has three locations, specifically Philadelphia, Plymouth Meeting, and Exton, and those who would like to know more about the medical spa may want to check out their website, or contact them on the telephone or through email. For their Philadelphia location, they are open from 9:00 am to 7:00 pm, from Monday to Thursday, and from 9:00 am to 4:00 pm on Fridays and Saturdays.
