

New Professional Pest Control Company in Los Angeles County

September 08, 2020

September 08, 2020 - PRESSADVANTAGE -

Best Quality Termite and Pest Control just opened on Thursday of last week and has already helped hundreds of families and business owners with a wide variety of residential and commercial pest infestations. The company has a team of fifteen pest exterminators who have been professionally trained on how to treat every species of pest in the area. Their services have been getting a lot of great reviews and are known to be reliable and fast. The company has been extremely busy in their first week of business and plans to continue to help as many people as possible.

They offer three main pest control services. First, their custom pest treatments are their most popular. These treatments are custom engineered for each specific species of pest. This means each pest is treated in the best possible way based on which pest it is. They offer no generalized treatments. The species of pest the exterminators are treating determines which sprays they use, which equipment they perform with, and which methods they take in treating the property.

Next, their routine services are also very popular. These services are performed monthly, quarterly, biannually, and annually and do not require a contract. Their exterminators will go to the target property and will take the necessary preventative steps to ensuring that there is no pest infestation in the future.

A representative of the company recently said, "Why wait for a problem to happen and then try to fix it when people can prevent the problem from ever happening in the first place?" Finally, their emergency services are great for when people are faced with dangerous situations including wild animals or venomous pests. If people come across a dangerous animal or pest they should not try to take care of the problem themselves. They should always call a professional.

The company has noticed a recent increase in the number of pest infestations in the area. The president of Best Quality Termite and Pest Control said in a recent interview, "Pest infestations are on the rise because

pests are becoming resilient to everyday methods of treating pests. These methods include using over the counter products or any other DIY methods. Because most people use these methods instead of professional services, the pests are able to multiply and spread out of control. If people have a pest problem they should call a professional immediately because DIY methods aren't as reliable as they used to be.

The company has a lot of great reviews for their services so if anyone thinks they have a pest problem they should give Best Quality Termite and Pest Control a try. They can be reached by phone or on their website at <https://termite-and-pest-control.business.site/>. They are open from 9 a.m. to 5 p.m. on weekdays and are closed on weekends. One of their exterminators said, "People should not hesitate to call a professional when they have the slightest hint of a pest infestation in their property. Pests can take over an entire property overnight so make sure to call a professional immediately."
