Tree Service Fresno Announces Discounted Services During Fire Season

September 15, 2020

September 15, 2020 -
Tree Service Fresno, a local Fresno, CA landscaping and tree service company announced they will be offering discounts for brush clearing services, hillside clean-ups, and lot clean-ups during this dangerous fire season.

Those interested should contact Tree Service Fresno customer service for detailed information.

Brush clearing is selectively clearing a property of all the smaller sized vegetation and thick stands of smaller trees. Hand clearing brush is hard, time consuming, inefficient and back breaking work however it is the preferred method because clearing brush with a dozer leaves the property scarred and un-attractive. While both methods form piles of brush, forestry mulching eliminates the brush piles. The brush piles are mulched into an attractive layer of vegetation that also helps replenish the soil.

Brush clearing is quick and cost-effective

It may be surprising to some to discover that a thick lot or acreage can be transformed in as little as a day, at a much better cost than other approaches. Forestry Mulching through smaller growth can be done much faster. You can open up much more property in a given amount of time than with any other method.

Advantages of Brush Clearing with a Forestry Mulcher

Real estate agents, landowners and developers know the value of brush clearing. It can sometimes mean the difference of selling a property in a timely manner, especially in a stagnant market. In many instances, the costs of brush clearing can easily be recovered and exceeded in the re-sale of the property. This is due to the attractiveness and perceived value of the property or land because of the brush clearing.

Forestry Mulching opens up the view of the land enabling prospective buyers to more easily see their vision of the property site and the lawns. After Forestry Mulching, the property can right away be walked and driven on.

Brush clearing service is also a smart option for homeowners. It can provide a homeowner not only with more usable property space, but will also rid the area of habitats for snakes, ticks, chiggers and other pests.

Another benefit of Brush Clearing with forestry mulching equipment is that it can be done with minimal disturbance to the topsoil, desirable trees and vegetation. It reduces the type of dry vegetation and woody material that can spark wild fires that can spread through forests, suburbs, and residential areas.
