

Zenapet Stresses Role of Glucosamine in Helping with Dog Hip and Joint Issues

September 30, 2020

Costa Mesa, California - September 30, 2020 -

Zenapet wants to stress the important role of glucosamine as a key ingredient of their Glucosamine for Dogs superfood supplement, particularly with regards to providing help in dealing with hip and joint issues. This particular dog superfood supplement contains, glucosamine, organic chicken bone broth, methylsulfonylmethane (MSM), chondroitin, inulin, nutritional yeast, kelp, and bromelain. Arthritis involves swelling of the joints while glucosamine is an anti-inflammatory agent. Thus, glucosamine may help in restoring joint health and reducing the dog's pain. More about this product can be found [here](#).

Meanwhile, the organic chicken bone broth also contains a significant amount of glucosamine, plus other joint protecting compounds such as hyaluronic acid and chondroitin. Glucosamine is a chemical that is naturally found in the body that helps in repairing damaged cartilage, particularly the articular cartilage, which is the moist and spongy material that serves as a cushion between joints. It is a kind of amino sugar that studies have shown to enhance the synthesis of glycosaminoglycans, which is one of the building blocks of cartilage. Unfortunately, the natural production of glucosamine by the body decreases with age, which necessitates the use of supplements, such as Zenapet Hip & Joint.

Caren Collins, a spokesperson for Zenapet, says, "Our glucosamine for dogs supplements are filled with known effective ingredients that boost joint health, increase energy, & ease discomfort by helping reduce inflammation. For freedom of movement and comfort, Zenapet's special blend works to help support mobility for a healthy lifestyle in dogs of all ages, sizes, and activity levels. No fillers, sugars, salts, or gumming agents. Non-GMO and great for all breeds small to large and for all ages from puppies to senior dogs. Our extra strength formula will be your best go to when your canine needs it."

Glucosamine is often provided in combination with another natural chemical, chondroitin, which has been observed to have the potential to promote cartilage elasticity and water retention. It may also help in restoring joint health in dogs naturally with the result that mobility is enhanced. It should be noted that glucosamine has been used in veterinary practices in the US and Europe for approximately 20 years. Veterinarians commonly recommend glucosamine and chondroitin as an alternative for the treatment of osteoarthritis in dogs who cannot tolerate the adverse effects of NSAIDs, or as an add-on therapy.

Zenapet has carefully chosen ingredients to synergistically complement glucosamine for dogs such as MSM, bromelain, nutritional yeast, inulin and kelp. These ingredients combined together will enhance the effects and potency each one of the ingredients would have on its own.

Customers who have tried this Zenapet product have left highly positive reviews on Amazon. For instance, Heather gave the product a five-star rating and said, "Excellent customer service and excellent product! My 12 year old dog loves it and she is running around like she is a puppy!?"

Dog lovers who would like to get more information about Glucosamine for Dogs and other dog supplements may want to visit the Zenapet website at www.zenapet.com.
