

Commercial Painting Company API Coatings Has Launched New Website

October 12, 2020

October 12, 2020 - PRESSADVANTAGE -

API Coatings, LLC, based in Niceville, Florida, has announced the launch of their new website. The company is a commercial and industrial painting, restoration, and waterproofing contractor for buildings along the Emerald Coast of Florida. API Coatings is also the commercial division of Accurate Painting of NW Florida.

Along with commercial and industrial painting services, API also offers pressure washing, epoxy floor coatings, decorative concrete, deck and dock refinishing, electrostatic refinishing, and more for a variety of markets including new construction builds, hospitals, schools, hotels, and more.

James Stackhouse, Director of Sales and Marketing at API Coatings, says, "We are dedicated to ensuring each project is completed correctly and efficiently. Our team has well over 100 years of combined experience backed by decades of industry product knowledge. We listen to our customers and provide coating solutions that meet their needs and desires. By using quality products and installing coating systems in accordance with manufacturer's recommendations, we are able to provide every client with immediate peace of mind and long-term satisfaction."

They provide structural painting for commercial and industrial buildings on the Northwest Coast of Florida, including all of the Niceville, Navarre, Destin, Pensacola, and Panama City Beach areas. They undertake a number of steps in their exterior commercial painting projects. These include the staging, weatherproofing, and other aspects of preparation. Their painting professionals take special care in covering up areas that need to be protected and they clean up after completing the work, ensuring that the business will look exactly as it did before the project was started. Those who want to know more about the company may want to view the company Facebook page.

For the interior painting job for commercial and industrial buildings, they make sure to review all of the things that have to be done in order to come up with an accurate estimate. They will also handle the scheduling, including notifying people and ensuring that rooms are empty of equipment and furnishings. They will always make it their priority to minimize the impact of the painting job on the employees and tenants.

They also provide epoxy floor coatings for commercial buildings. The epoxy floor coatings that they provide are of such quality that they repel oil, grease, brake fluid, paint, antifreeze spills, caustic chemicals, and more. Concrete floors with epoxy coatings offer a number of benefits, including being easy to clean, moisture resistance, ability to act as a sealer against dust and vapors.

They also offer electrostatic refinishing for various metal surfaces, such as: metal fences and gates, light poles, metal furniture, shutters, school lockers, bathroom partitions, antique fencing, and chain link fencing and railings. Many of these are exterior, which means that they are exposed to the elements that can cause their finishing to fade over time. Electrostatic refinishing can restore the previous luster of these metal surfaces. It uses negatively charged coating ions that are attracted to the positively charged ions in the metal. This ensures that the paint "wraps" itself around the metal surface for a coat that would be extremely difficult to remove. And it also allows the paint to reach those places that are often hard to reach.

Those who would like to know more about the commercial and industrial painting and other services offered by API Coatings may want to visit their website or contact them on the telephone or through email.
