

## **Dr. Aaron Kosins Offers Best Rhinoplasty with His Broad Experience and Cutting-Edge Approach**

*November 05, 2020*

November 05, 2020 - PRESSADVANTAGE -

The Rhinoplasty Center, a clinic based in Newport Beach, CA, has revealed with pride that Dr. Aaron Kosins offers one of the best in the area when it comes to rhinoplasty. This is mainly due to this broad experience and his use of cutting-edge techniques, specifically piezosurgery. He is actually world-renowned for his research studies in different fields of plastic surgery, including rhinoplasty.

Piezosurgery is believed to be a game changer when it comes to rhinoplasty. Dr. Kosins has been using this method in all of his rhinoplasties for more than two years and the results have been no less than outstanding. It makes use of vibration or ultrasonic energy for cutting hard tissues. What makes it significant is that because it vibrates at a particular frequency, it will cut hard tissues such as bone while avoiding the cutting of soft tissue like the skin.

After the physical exam and taking an initial history, Dr. Kosins will take photos of the patient's nose in 8 to 10 standard views and these will be used during the discussions with the patient. Those pictures will also serve as reference point when evaluating the result of the operation.

It should be noted that the standard instruments for rhinoplasty are actually more than 100 years old where a hammer and chisel are literally used to break the bones for them to be moved and narrowed. In contrast, with piezosurgery, the bones can be gently sculpted and cut with less swelling and bruising. Results have revealed that the use of piezosurgery can shorten the recovery and healing time for the patient.

Dr. Kosins explains, "Piezosurgery is a revolution for a rhinoplasty surgeon because of the accuracy and precision of the technology. In the past, osteotomies (bone breaking) have always been done "blind," meaning the instruments were placed under or through the skin and we could never see what was happening. Bone fractures could occur where we did not want them to and the movement was uncontrolled. With piezosurgery, asymmetries and irregularities can be sculpted with precision and all bone cuts are visualized during surgery. This method has allowed me to provide one of the best rhinoplasty procedures in the area, especially with the frontal view and dorsal aesthetic lines."

The dorsal aesthetic lines are those lines on the nose that are seen on front view with flash photography. Dr. Kosins believes that it is the front view that makes a lot of difference in the results of a rhinoplasty procedure. He wants to point out that getting a good front view that makes the patient more attractive is the key goal of a rhinoplasty. He explains that when women contour their noses, they are actually trying to create shadows that will set off the bridge from the nasal sidewalls. Through rhinoplasty, Dr. Kosins can create those desired symmetric and fluid dorsal aesthetic lines. And with the use of piezosurgery, he can sculpt the bones with precision to smoothen the transition from the forehead and brows to the nose.

Dr. Kosins has divided the rhinoplasty procedures that he provides between primary rhinoplasty and secondary / revision rhinoplasty. Primary rhinoplasty is a patient's first operation on the nose. During consultation, he will try to understand the three things that the patient doesn't like about his or her nose.

He will either perform an open or a closed rhinoplasty, depending on what has to be done and the expectations of the patient. Open rhinoplasty involves a small incision of the nose at the columella or the area between the nostrils. The incision is just 5mm in length and the scar is hardly visible. On the other hand, a closed rhinoplasty is performed on the inside of the nose with no external incision on the columella. A closed rhinoplasty may be better because of the lack of an external incision. However, an open rhinoplasty provides for more control over certain parts of the operations, for instance, the nasal tip.

People who are interested in knowing more about the rhinoplasty procedure performed by Dr. Kosins may want to visit The Rhinoplasty Center website at <http://therhinoplastycenternewportbeach.com/>, or contact them via the telephone or through email.
