

Electrical Test Instruments Announces Satellite Office Location

November 02, 2020

November 02, 2020 - PRESSADVANTAGE -

New Charlotte Location Enables Company to Better Serve Its Southeastern Customer Base

Frederick, Maryland ? Electrical Test Instruments (D/B/A ETI Precision, or "ETI"), a leader in the calibration, repair, and sale of test and measurement equipment, today announced the opening of its Charlotte, NC office. The new location is ETI's first satellite office, marking a milestone for the company that was founded in 1994.

"We're excited to establish a local presence in Charlotte and continue to deliver best-in-class calibration services to our customers throughout the Southeast," says CEO Jonathan Blanchard. "Our North Carolina team will support customers in this area with high-quality onsite calibration services, minimizing the downtime of critical test and measurement equipment."

Based in Frederick, Maryland, ETI's primary injection high-current circuit breaker testers are trusted by

electrical testing companies worldwide. Customers and partners include Potomac Testing, Schneider Electric, and Protec Equipment Resources. The company specializes in the repair of breaker testers, relay test sets, insulation testers, transformer ratiometers, oil test sets, AC or DC hipot testers, and other electrical testing equipment.

ETI is also dedicated to providing industry-leading customer service that thoroughly answers customer questions in a timely manner. Their technicians are trained to troubleshoot problems over the phone, helping avoid repairs when necessary. The company also offers emergency onsite services throughout the U.S. and can service facilities with anywhere from five to 500 pieces of equipment. Among its clients, ETI has served electrical testing companies, data centers, utilities, breaker repair shops, manufacturers, municipalities, military bases, and universities.

ETI's calibration services can be tailored to fit a customer's needs. The company is continually investing in its calibration capabilities to better serve its customers and offers a two-year warranty on its products.

For Blanchard, a Charlotte office supports ETI's existing customers in the Southeast as well as the needs of local electrical testing companies and data centers for onsite calibration services.

"Although we provide nationwide service in all 50 states, many of our customers are located in the Southeastern U.S.," says Blanchard. "Our local presence in Charlotte will drive exceptional service quality for our customers in the Southeast."
