Leeds Pest Control Company Can Help with Any Kind of Pest Problem in Leeds and Surrounding Areas

November 23, 2020

November 23, 2020 -
Apex Environmental Leeds, a pest control company based in Leeds, UK, has revealed that they are ready to provide comprehensive pest control services in Leeds and neighbouring areas for whatever pest problem a homeowner or property owner has. They are committed to responding to any reports from residents any time of the day and any day of the week. They can provide their comprehensive pest control services in Leeds and throughout West Yorkshire. They offer integrated pest control services, making use of a broad range of treatments and technique to resolve any kind of pest problem efficiently and as fast as possible.

Tom Johnson, a representative for Apex Environmental Leeds, says, ?We think it's vital being a family pest control business in Leeds, as we understand what it means to live with an unwanted pest in your family. Do you have wasps, moles, rats, mice, fleas, bees, ants, rabbits, birds, squirrels, bed bugs, rodents or other pests causing you problems? With over 30 years' experience in pest control, Apex Environmental Leeds can protect your business, your premises and your bottom line.?

He continues, ?Well experienced in pest control, our specialists are capable of providing outstanding customer service. Our professional pest control services promise the highest levels of guarantees for both households and commercial businesses. All of our vehicles are unmarked so you can be sure of a discreet pest control service every time.?

They make use of integrated pest management (IPM) strategies designed to offer long-term pest prevention. IPM is an ecosystem-based management strategy that makes use of a combination of techniques, such as biological control, alteration of cultural practices, habitat manipulation, and use of resistant varieties. They only use pesticides after their observation has shown that pesticides have to be used, and even then, they will ensure that their use of pesticides complies with the established guidelines and the treatments used will only get rid of the target pests. The pest control materials are chosen and utilised in such a way that risks to human health, non-target and beneficial organisms, and the environment, are minimised.

One of their most requested services is rat pest control. The milder winters have been observed to help rat populations thrive. This has been a problem because of the emergence of rats that are resistant to rodenticides. To provide a solution to this problem, they use an IPM approach. They will first send a pest officer to the home or building and examine the rats and mice in the premises to determine the proper treatment. Clients would be able to boost the success rate of the treatment by ensuring that all revisit appointments are followed and by not repositioning or interfering with any bait stations. Clients are also advised to keep pets and children away from the bait stations at all times, getting rid of all food sources, and following all of the instructions provided by the pest control officer.

Apex Environmental Leeds can also offer wasp control services. If there is a large number of wasps in and around a home or building, there is a strong chance that a wasp nest is nearby. Each nest can contain as much as 5,000 wasps during their peak activity.

It is important to remember that treating a wasp nest can be a very risky activity. The wasps inside the nest could become aggressive, resulting in multiple stings for anyone near the nest. Unlike bees, wasps will not die after one sting.

It is also vital to note that wasps should only be treated when they actually pose a threat to public safety and health. If not, it would be better to leave them alone because they can be helpful in gardens because they feed their grubs on caterpillars and other kinds of insects.

Residents of in Leeds and neighbouring areas who would like to learn more about the pest control services offered by Apex Environmental Leeds, may want to check out their website, or contact them on the phone or through email.
