

Plan Sea® Introduces Marine Emergency Back-Up Power and Rescue Device

September 09, 2015

September 09, 2015 - PRESSADVANTAGE -

TAMPA, Fla. ? Plan Sea® launched today on Amazon.com, offers boaters a compact emergency back-up power unit, boat jump starter and sea rescue device. The patent-pending Plan Sea has enough power to jump-start an outboard motor up to 20 times on a single charge. It contains patented green and red rescue laser flares that can be seen for over 10 miles at sea and have a 400 hour display life. Plan Sea also serves as a power backup for mobile devices. It?s a ?must have? of boating accessories, including Emergency Position Indicating Radio Beacons (EPIRBs), flares and life rafts.

?Getting stuck with a dead battery when you?re out to sea is a big hassle, but it?s also quite dangerous,? said Rick Estrada of Plan Sea. ?It pays to be prepared. Without this device, you will have to call Sea Tow, wait hours and pay several hundred dollars for their service. Plan Sea should be on every boater?s list of essential emergency boat supplies and boating accessories.?

Plan Sea comes in a float-capable marine dry bag for safe storage. The device, which is about the size of paperback book, consists of a power storage unit, cords and built-in alligator clips. Designed for ease of use, Plan Sea features indicator lights and simple instructions. It can provide portable back-up power to charge mobile devices such as phones, tablets, iPads and laptop computers.

Reviews from early users have been positive. Captain John Abendroth of "The Otherside Fishing Charters" commented on Amazon, ?I am very impressed with the product. As a professional charter Captain for 11 years, safety is a priority. My job entrusts me with the lives of my crew and passengers and I cannot have equipment that fails when needed. The Plan Sea gives me the confidence to go offshore, knowing that if I need to jump my batteries to start a down engine that it will produce.? Another customer noted, ?I fish far offshore and used to lug around a large and heavy jumper just in case my batteries died. This Plan Sea is so small that when I saw it, I could not believe it would jump start my Verado 350's. I turned off my batteries and tested it. It jumped all three of them and still shows a full charge. The lasers in this thing are insane. I went outside at night and pointed the lasers at buildings that had to have been 3 miles away and it lit them up.?

Plan Sea is sold by Disperse Dev and Fulfilled by Amazon. The list price is \$349.99 but Disperse Dev is offering the Plan Sea for \$179.99. For more information, visit Plan Sea® on Amazon.com.
