

Dallas Shoppers Spending More for the Holidays

December 03, 2020

December 03, 2020 - PRESSADVANTAGE -

Local business bloggers in Dallas are feeling encouraged after new data has come out showing the region is set to enjoy higher consumer spending this holiday season than other parts of the country. This was based on a new holiday survey by Deloitte revealing that the holiday shopper in the Dallas-Fort Worth metroplex spends more than the average holiday shopper in the whole US.

The Deloitte holiday survey found that people in the Dallas-Fort Worth metroplex plan to spend \$1,655 this holiday season, which is higher than the average budget of \$1,387 of holiday shoppers in the United States and is 10 percent higher than the amount spent in 2019. And among the Collin County cities, Richardson had the highest holiday shopping budget of \$2,003. This particular city is 36th of 570 cities, according to national ranking.

One local business blog belonging to an orthodontics practice noted that a large percent of Dallas shoppers had already begun shopping as of October 2020 and approximately 60 percent planned to begin purchasing holiday gifts before the middle of November 2020. Meanwhile, the article reminds people not to forget to save some money for the following year as the year 2020 is about to end.

Walnut Central Orthodontics offers various kinds of treatments. These include: treatments for common orthodontic issues; oral and maxillofacial surgery; patient education; and Empower® braces. Common orthodontic problems include crowding of the teeth, open bite, deep overbite, underbite, missing lateral incisors, uneven spacing of teeth, and overjet. They also offer early preventative treatments for orthodontic issues.

Oral and maxillofacial surgery procedures are for various purposes. These include: corrective jaw surgery to remedy poor alignment of the upper and lower jaws; wisdom tooth removal; cleft palate repair; facial trauma; temporomandibular joint (TMJ) repair; oral cancer treatment; and dental implants. Surgery can be provided for facial trauma, which is commonly the result of sports injuries or motor vehicle accidents. Typical injuries include fractured bones in the face, jaw, or eye sockets, lacerations to the face, and missing teeth.

Walnut Central Orthodontics also offers Empower® braces, which are a kind of self-ligating braces. The difference of this type of brace compared to conventional braces is the absence of rubber bands or elastics. It offers several benefits, such as: comfort, better aesthetics, low maintenance requirements, and better results compared those offered by traditional braces. Empower® braces exert less continuous pressure on the teeth, which means there is less discomfort and pain. They also provide better aesthetics because they are available in various configurations, including a clear option. They are also easier to adjust and need less-frequent appointments with the dentist, and the visits are shorter. And its active and passive adjustment system allows for better fine-tuning and better results in less amount of time.

They can also provide Invisalign® treatment, which applies a series of removable, virtually invisible, and comfortable aligners. The Invisalign clear aligners are fabricated using iTero® 3D computer imaging technology. And because the aligners can be removed, people can eat and drink in comfort while in treatment, including no hindrances to brushing and flossing. There are also no wires or metal components, which means that patients will spend less time in the orthodontic office for adjustments. Invisalign treatment will also allow patients to view their virtual treatment plan where they can visualize how their teeth will look after the treatment has been finished.

With the Invisalign aligners, patients wear each set of aligners for two weeks, removing them only when drinking, eating, brushing, or flossing. The aligners are replaced gradually as the teeth move little by little, week by week. Patients will visit Walnut Central Orthodontics about once every six weeks to make sure that the treatment is progressing as planned. Total time for the treatment will average 8 to 15 months and the number of aligners worn during the period will range from 18 to 30.

Those who are interested in the services offered by Walnut Central Orthodontics and other announcements this holiday season may want to check out their website, or contact them on the telephone or through email.
