

# Dexkit's Swap Aggregator Passes \$2 M in Volume

*December 10, 2020*

December 10, 2020 - PRESSADVANTAGE -

DEXKIT is proud to announce that the DEXSwap Aggregator has exceeded \$2 million in volume over the past 30 days. This is a significant development for the up and coming decentralized exchange platform. This aggregator guarantees more tokens and the best price for tokens and it will be used as the basis for a full-service exchange that is scheduled to be released during the first quarter of 2021. Aggregator volume can be tracked at <https://0xtracker.com/apps/dex-kit>.

John Walter, PR manager for DEXKIT, says, "This is extremely exciting because the technology will give traders peace of mind knowing they are always getting the best price. Furthermore, there are a number of features that are soon to be released, such as gas-free limit orders, trading bots, and protocol analytics. Long story short, the aggregator has been extremely successful and upcoming features will leverage the technology to help traders make educated and profitable trades."

DEXKIT is a next-generation, decentralized, cryptocurrency exchange (DEX) that employs technology based on the ZRX protocol to allow the creation of tools for advanced trading, swapping, atomic swapping, and market-making for decentralized ERC20 and ERC721 white label solutions. Customizable toolkits are provided that will allow traders to make well-informed and profitable trades. Such tools will permit users to set decentralized stop/limits and private orders, place leverage orders, create an NFT collectible marketplace, deploy arbitrage bots, earn from arbitrated orders, and track 0x mesh liquidity which can access statistics on decentralized protocols.

John wants to further emphasize that the most significant development will be the full-service exchange, due to be released at or before the end of Q1 in 2021. The importance of the DEXKIT exchange comes from the use of trading tools that have previously only been available on centralized exchanges like Kucoin and Binance.

The DEXSwap aggregator is the flagship offering from DEXKIT and is the first feature in the suite of

advanced DeFi tools that can be beneficial for cryptocurrency investors. This aggregator searches 13 DEXs simultaneously to determine the best price with the healthiest liquidity, using an intuitive interface. Those who have already used swap sites like Uniswap will be familiar with the user interface. DEXSwap scans the following DEXs in the background: Balancer, Bancor, 0x, DODO, Kyber, Curve, mStable, Oasis, Mooniswap, Sushiswap, Swerve, Shell, and Uniswap. DEXKIT will then choose whichever DEX is hosting the best price and liquidity to perform the swap. The result is that cryptocurrency traders will get more tokens for their trade, and this is guaranteed. Interested parties can visit the DEXSwap aggregator at <https://dexkit.com/aggregator/>

Meanwhile, the DEXKIT exchange will build on the aggregator with several features. These include leverage trading, permissionless token listing, decentralized limit/stop-limit orders, trading history, depth chart, and trading graphics, free order cancellation and placement, order book composed with liquidity from several decentralized cryptocurrency exchanges, advanced trading bots that can place 'smart' orders and arbitrate between multiple exchanges, DEXKIT's core aggregator technology which guarantees the best price for every trade, and non-custodial asset management, which means users will have full control of their tokens until the trade is settled. In addition, DEXKIT will allow hosts to easily launch their own customized exchange. Owners will be able to observe the trading and volume generated on their exchange by using the intuitive DEXKIT dashboard.

DEXKIT is based on established open source technology and will include built-in exclusive features that are only available to the users of the platform. It will employ a network of affiliates to promote the project and provide Kit holders with opportunities for earning passive income. Those who are interested in learning more about the DEXSwap Aggregator and the upcoming decentralized exchange platform may want to check out the DEXKIT website at <https://dexkit.com/> or contact them through email.
