

Neighbors HVAC Provides Advice To Temecula Community About Heating And Air Services

December 22, 2020

December 22, 2020 -

Neighbors HVAC, a company based in Riverside, California, is providing advice for the best practices in maintaining heating and air conditioning for the community in Temecula. The company serves a large region in the state of California and is known for the provision of personalized, high quality service. Learn more here: HVAC Repair Temecula.

Neighbors HVAC points out that, when it is really hot outside, maintaining a significantly lower interior temperature will require an AC to spend much more energy than usual. It is because of this that the company recommends keeping the thermostat settings lower during the summer months in order to keep one?s utility bills within a reasonable range. Not only does it help lower utility cost, the company points out that a higher thermostat setting can also help to slow down the heat coming into one?s home, making sure it stays nice and cool. For example, if the outside temperature is 100°F, the company would recommend setting the thermostat anywhere between 75 to 80°F while everyone is at home, and even lower than that when the house is unoccupied. The company also points out that the ideal temperature would also vary with the season. Depending on the season, the ideal house temperature for both comfort and efficiency is between 68 to 78°F. In the summer, the recommended thermostat setting is 78°F. In the winter, 68°F is recommended in

order to save energy. Learn more here: Furnace Repair Temecula.

The company would also like to provide some useful tips for improving the efficiency of an air conditioning unit. The first tip is to ensure that an air conditioning and heating unit is regularly serviced. One should always ensure that the outdoor unit is clean and debris-free and to also remove dust from the indoor unit. One should also prevent the blockage of airflow. No matter which type of unit one has, it should be inspected, cleaned and serviced at least once a year. Ideally, the recommendation of the company is to have the heating system checked in the Fall and the air conditioning checked in the Spring.

Neighbors HVAC is known for providing a high standard of service for a reasonable price. The cost of the repair or servicing of an air conditioning unit in the Temecula region usually varies between $170 to $600 dollars, depending on the model of the unit (national average is approximately $365). For services such as cleaning ducts and vents, the cost may range from $300 to $400 dollars, while the installation of a thermostat may range between $150 and $200. The company recommends that all homeowners take measures to service their heating and air conditioning units regularly as maintenance of units will prevent major breakdowns and ensure the smooth running of the units for a longer period of time. Regular maintenance is shown to be more cost efficient in the long run and also improves the longevity of the units. Learn more here: Temecula HVAC Services.

Neighbors HVAC offers a wide range of HVAC services in Temecula and the surrounding areas in order to ensure that homes and buildings are comfortably warm and safe during the cold winter months as well as cool during summer. Some of their services include HVAC tune-ups and maintenance, HVAC repair, new HVAC installations, AC tune-ups and maintenance, AC repair, new AC installations, heating furnace tune-up, heating furnace repair and new heating installations.
