

As Winter Nears, BroadRiver Plumbing Assures Uninterrupted Electric Heater Repair, Replacement Services

December 21, 2020

December 21, 2020 -

December 2020, Beaufort, SC - As the winter season begins, BroadRiver Plumbing, the Professional Plumbing Company in Beaufort, Hilton Head, and Bluffton strengthens its electric water heater repair or replacement services.

According to Beaufort-based BroadRiver Plumbing, water heater repair can be dangerous for inexperienced homeowners, especially for electric powered water heaters. Typically, it is wired to a 220-volt circuit but works the same as the gas-fueled heater. When power is on, the cold water is heated using the electric heating elements inside of the tank.

With its important value during the winter, water heaters need to be functional at all times. Maintaining, cleaning, and tuning up the electric water heater regularly can help reduce problems such as noise, sediment buildup, no hot water, inadequate hot water, low pressure, and foul-smelling water. "A well maintained and repaired water heater will be useful, reliable, and will have a long-term operation," the plumbing company adds.

The plumbing expert in Bluffton SC says that when maintaining or replacing an electric water heater, the following parts must be checked: storage tank, heating elements, thermostats, temperature, pressure relief valve, anode rod, and dip tube. This way, a proper solution can be applied at an early stage.

The Electric Water Heater Repaired Or Replaced In Bluffton, Beaufort, and Hilton Head said that homeowners could follow these steps to identify problems in the system. First is inspecting the heater for any leakages, corrosion, obstructions, and distortions. The next step would be draining and flushing electric heaters to remove mineral sediments, dirt, and deposits, followed by testing the thermostats.

The thermostat examination's main aim is to check power coming to the elements and tighten the wires if they are lost. Following the thermostat test is checking the anode rod that protects the electric water heater from rust or corrosion. Lastly, the dip tube must also be checked. Distorted dip tubes can mean cold baths.

To ensure consistent hot showers this winter, BroadRiver Plumbing provides electric water heater repair or replacement service. The plumbing expert also offers a wide range of services in the areas they serve. They offer toilet repairs, stoppages or replacement, kitchen sink repair or replacement, and sewer camera inspection. They also handle slab leak repair and tankless water repair and replacement.
