

Neighbors HVAC Is Offering HVAC Installation, Maintenance, And Repair Services In Temecula

January 04, 2021

January 04, 2021 -

HVAC servicing and repair company Neighbors HVAC is offering its services in Riverside County, CA and serves the cities of Canyon Lake, Corona, Hemet, Lake Elsinore, Menifee, Moreno Valley, Murrieta, Perris, Temecula, Wildomar, and Winchester. The company offers services such as HVAC tune-ups and maintenance, HVAC repair, new HVAC installations, AC tune-ups and maintenance, AC repair, new AC installations, heating furnace tune-up, heating furnace repair, and new heating installations. The company claims to be the best option for those searching online for ?Heating and Air Temecula?.

The company says that just like a car, an AC unit needs regular service and tune-ups to keep it running in tip-top shape. It says that home air conditioners are often an afterthought until it?s summertime and they are needed to cool down houses. The company recommends getting the AC regularly serviced to get the cool and comfortable air that one expects. The company says its AC tune-up service helps prevent breakdowns and ensures that the AC system will last as long as it should. Since a new AC system can be very expensive it?s important to do everything to get the most out of it.

The company?s AC maintenance service includes air temperature checks at the vents, checking the outdoor

unit itself, inspecting the coils on the unit, checking filters, inspecting all electrical connections, and inspecting the thermostat and making sure it?s working properly. Advantages of getting the AC maintenance service include a longer life for the AC unit, as they can be expensive to replace. Regular maintenance also helps in lowering energy bills as the motor, the condenser, and the fan could be working harder than needed, and costing customers extra money. Finally, regular maintenance keeps the unit under warranty as manufacturers require that the unit is properly maintained in order to cover the parts under warranty.

The company recommends AC repairs when the customer encounters certain problems in their unit. Units might start making strange noises such as clanking, grinding, or banging. These noises could be caused by a loose fan belt or a poorly lubricated central air fan motor. There can also be strange smells, such as a gas smell. The AC unit also needs to be repaired when it no longer produces cold air, or the thermostat cannot be adjusted. This problem may be caused by dirty air filters or even malfunctioning electronic control boards. Another problem might be water collecting near the AC unit as the result of a blocked drain tube. It can also be a sign of a refrigerant leak, which can potentially harm the customer or their unit. There can also be a faulty circuit breaker if the AC unit trips the home?s circuit breakers. If energy costs continue to increase, it may be a sign that the AC unit is not as effective as it should be. If the air conditioning unit is over ten years old and is no longer productive, it is a sign that the unit needs repair. The company recommends those looking for ?HVAC Repair Temecula? to avail of its repair services.

The company also offers AC replacement services and touts its many benefits. The first benefit is that a homeowner or business owner will recognize a significant drop in their electric bills as new systems are continually improving their efficiency. Another benefit is that there is a newer R-410a refrigerant that releases fewer carbon emissions which makes it more eco-friendly. Also, by installing the newer AC system, there will be a noticeable and meaningful difference and improvement in the home?s air quality. Another way a new AC unit can be beneficial is that a newer unit will be a lot quieter which is almost always favorable. The company offers free estimates for AC replacements in residential and commercial properties.

A spokesperson for the company says, ?We always put you, the customer, first. Our goal is always to leave your home with you knowing that your AC unit is in great shape, and ready to function properly for years to come. Our expertly trained AC technicians know precisely what to look for when they come to your home to inspect your AC. We?ll look at your AC system from top to bottom, both inside the house, and out. We check filters, refrigerant, the condenser coils, the fan system, and more. While we work, we?ll, of course, keep an eye out for any other issues we see and discuss these problems with you when we are done. If you are searching online for ?Air Conditioning Temecula?, please call us and give our services a try.?
