

Pre-engineered Metal Building Experts, STEVENS, Highlights Importance of Customized Kits in Metal Building Projects

December 30, 2020

Middleburg Heights, Ohio - December 30, 2020 -
Middleburg industrial construction company STEVENS highlights the role of customizable pre-engineered metal building kits in creating unique, one-of-a-kind constructions. These units come in a range of options and are highly flexible to tailor metal buildings to the specific needs of a business. ?Our steel buildings can be adapted for government buildings, food manufacturing buildings, energy and power plants, garage buildings, or any other number of industrial metal buildings your business requires.?

As the best pre-engineered metal building manufacturer, STEVENS, leverages American-made, recyclable Nucor steel to customize pre-engineered metal buildings with industry-leading capabilities. STEVENS advises businesses to invest time in understanding their construction needs before entrusting a company with the task to get the job done right, adding, ?Every building project is an investment in your business. You want to make sure that they have the design flexibility to match your specific business needs.?

STEVENS has earned the reputation as one of the largest private construction firms in the industry that is the single-source solution construction company. They can handle any project from development to design, construction, and completion, turning designs into reality.

The prefabricated steel building supplier and erector utilizes advanced design systems, BIM, a 3D building modeling software, and Nucor steel to meet client needs for Pre-Engineered Metal Building Projects.

As a proud Nucor partner, STEVENS designs sustainable and durable steel buildings that adhere to the green movement Earth-first mindset. Nucor Building Systems, known for their environmentally friendly, high-quality 90% recycled steel made in the United States, helps make this possible.

The Middleburg construction company lists the benefits of choosing a pre-engineered steel building kit, which is aesthetically pleasing, flexible, eco-friendly, durable, efficient, and cost-effective.

?Our pre-engineered steel buildings' structures are incredibly versatile, allowing for easy expansion in the future.? Another advantage STEVENS highlights of pre-engineered steel buildings are that it adapts to a range of energy-efficient insulation systems, ?which help to reduce heating and cooling costs.?

The building systems team at STEVENS fosters client relationships, erecting customized metal building solutions that fit their needs and design specifications. STEVENS has earned a reputation for its high-quality pre-fabricated steel buildings that meet all local codes and requirements.

?With our company, you will have a full-service construction and building systems team (design, engineering, project management, installation, erection, and completion) for your next steel buildings project.?

The Metal Building team leverages Building Information Modeling software to design pre-engineered metal buildings. The 3D building modeling digital software helps the engineers honor time and budgetary limitations of clients while erecting accurate metal structures following every specification.

?With BIM, you can be assured that your metal buildings will have enough support and room for proper flow and function. This software technology identifies any potential hazards in the design structure of the metal building so that problems can be prevented and solved before erection begins (which would result in costly solutions).?

STEVENS is proud to be the leading US custom pre-engineered metal building supplier with 75 years of experience. More information on pre-engineered metal building kits, and their benefits, is available on the STEVENS website.
