

Central Texas Spine Institute Offers Orthopedic Stem Cell Treatment

January 07, 2021

January 07, 2021 -

Central Texas Spine Institute PLLC, based in Austin, TX, has announced that they are offering orthopedic stem cell treatment, which is considered to be the future of orthopedics. The process involves extracting bone marrow cells from the patient. The extract contains some stem cells, which are then separated through a centrifuge and then injected back into the patient?s body in that specific area where treatment is required. The stem cells will form that specific tissue that is need, such as cartilage tissue in a joint. Theoretically, ligaments, tendons and bone cells can be generated from stem cells to repair those structures that have been damaged.

Dr. Randall F. Dryer for the Central Texas Spine Institute PLLC, says ?Stem cell orthopedic therapy has the potential to replace many types of joint, bone, and spinal surgery with a simple series of injections. The cells immediately begin to repair the injuries, and positive progress can be observed almost right away.?

Dr. Dryer has several years of experience treating all kinds of spinal issues and continues to stay up-to-date

with all emerging technologies, such as stem cell therapy. He is one of the leading spine surgeons in the US and is a recognized and active leader in the field of medicine. He obtained his medical degree from the University of Iowa College of Medicine in 1977 and he finished his internship in 1978 and his residency in orthopedic surgery in 1982, all at the University of Iowa. Those who would like to know more about the Central Texas Spine Institute PLLC and their services may want to follow their Facebook page.

In 1984, Dr. Dryer completed his fellowship in spine and hand surgery in Cambridge, England at New Addenbrooks Hospital. He was board certified by the American Board of Orthopaedic Surgery in 1983 and he is a member of various professional organizations, including the Texas Medical Association, the Texas Orthopedic Association, Travis County Medical Society, the Cervical Spine Research Society, the Spine Arthroplasty Society, the North American Spine Society, the Society of Lateral Access Surgery (SOLAS), and he was previously a president of the Texas Spine Society.

Dr. Dryer offers a complete range of orthopedic surgical and therapeutic services. Aside from orthopedic stem cell therapy, they also offer lumbar fusion, epidural steroid injections (ESIs), endoscopic discectomy, motion preservation, artificial disc replacement, minimally invasive spine surgery, cervical discectomy, complicated spinal reconstructions, spinal cord stimulators, disc arthroplasty (disc replacement), lateral access spine surgery, sacroiliac (SI) joint injections / fusions, bone growth stimulators, and cervical disc arthroplasty.

Previous patients have left mostly highly positive reviews for Central Texas Spine Institute PLLC. They have an overall rating of 4.5 stars after more than 200 reviews on Google. For instance, MaryAnne W. gave them a five-star rating and said, ?Dr. Dryer is kind, compassionate, and competent. He just completed a fusion of my SI joint; my nerve pain is gone. He clearly explains what needs to happen and fights the insurance so his patients get the care and treatment they need.?

In another five-star review, Michael M. said, ?Dr Dryer is the one you are looking for. I met Dr. Dryer via a 2nd opinion visit and was so thankful that I did. He was very thorough with the initial exam and left no stone unturned. You will not be disappointed. I had 4 fusions from C3-T1, and when I woke up in my room, the pain and numbness I had been experiencing was gone. Dr Dryer's staff, both in the office and in the hospital, are top notch! I went out on a limb and tested my new neck after 3 months post recovery. After a 2700-mile motorcycle trip through CO and NM, I was pain free my entire trip. Dr Dryer is a life changer and I strongly recommend him for any of your spinal issues. You can?t put a price tag on experience and perfection especially when rated one of the highest in its field of neurosurgeons.?

Those who are interested in learning more about orthopedic stem cell therapy and other services may want to

visit the Central Texas Spine Institute PLLC website, or contact them on the telephone or via mail. They are open from Monday to Friday, from 8:00 am to 4:30 pm. Those who would like to know their exact location and other important information may want to check out their GMB listing.
