

HWS Has Been Accepted into the Ductless Directory as a Top Ductless Contractor in Kingston, New York

January 21, 2021

January 21, 2021 - PRESSADVANTAGE -

Hot Water Solutions, a ductless contractor based in Kingston, New York is proud to announce that they have been recently accepted into the Ductless Directory as High Efficiency Ductless Contractor. To be accepted into the Ductless Directory, a national ranking consumer resource, means that HWS underwent factory training, has achieved brand acknowledgement, and is dedicated to serving their community with honesty and integrity.

Being featured in the Ductless Directory means that consumers will be able to learn about the contractor's offering through a landing page on the directory. The landing page for a particular contractor show cases their product offering, including a video that informs consumers on the advantages of going ductless. The landing page also showcases their USP (aka their Unique Selling Proposition) and include one of the 3 videos that they receive as a "Featured Contractor". (With all 3 videos being uploaded and promoted on the Ductless Directory's YouTube channel.) The series of videos educates and informs consumer of the many advantages of going ductless.

Residents in Kingston, New York and throughout the Hudson Valley can be assured that the city has a climate suitable for a ductless heat pump. This is because a ductless heat pump, which is also called ductless mini split, is capable of both heating and cooling. A ductless heat pump can handle the most common challenges with regards to home comfort throughout the Hudson Valley.

Mini Splits systems are flexible in nature and can be used to solve one room, one area of your home or the whole house. Most homeowners may have experienced having a single room or a particular area that is either too hot or too cold, rendering it unusable during a specific time of the year. Having a ductless system can offer a solution to the problem. HWS can offer such a system and more information can also be obtained by checking out their Facebook page by searching for hwsinc on Facebook.

Matt LeFevre explains the importance of working with a contractor that will match the right system to your needs, "As Ductless Systems gain in popularity there are many contractors that push the same unit to everybody. Proper Sizing is one of the most important parts of going ductless and what you can count on when you work with the professionals at HWS."

Meanwhile, the electrification of homes is an ongoing goal in New York due to high energy costs of traditional heating and cooling equipment. High energy costs leads to high energy bills leaving many home owners looking for a way to save money on utility bills. Going Ductless offers a great solution towards reducing energy costs because almost 50 percent of homeowners' utility bills go towards heating and cooling the home.

Ductless heat pumps have gained even greater importance during the current pandemic because indoor air quality is affected by the fact that more people are working from home. With most heating and cooling systems, forced air equipment, such as a central air conditioner or a furnace, force air through a maze of ductwork that usually contains an accumulation of dirt, dust, debris, mold, bacteria, mildew, and viruses. A ductless system doesn't use ductwork and is able to avoid such kind of air contamination.

And because there is no need for ductwork, it is fast and easy to install a ductless system to practically any home. It is also a suitable solution for older homes without ductwork and for historic homes that would be marred by the installation of ductwork.

HWS has partnered with Fujitsu to provide homes with true home comfort. Fujitsu has a broad range of ductless mini split products, many of which are ENERGY STAR ® rated. HWS holds the highest level of certification as a Fujitsu Elite Contractor and therefore can offer the outstanding warranty of 12 years.

Many Fujitsu units even qualify for rebates and incentives. In addition, Fujitsu has a broad product offering making it easy to match a specific unit to the unique needs of each home owner.

One of the popular reasons for opting to install a ductless system is to add air conditioning to a home. Ductless air conditioning is commonly used for master bedrooms, the main living space, and the baby room. A ductless system is also suitable for garages, basements, or attics that have been converted into living space. Instead of putting additional stress onto a home's existing heating and cooling system, the additional work can easily be handled by a ductless system.

When interested in a top ductless contractor in Kingston New York and the Hudson Valley, residents may want to check out HWS website or contact them on the phone. They can be contacted 24 hours a day, every

day of the week.
