

NuSmyle Dental: When Looking for a Dentist Near Me in Logan Utah

February 08, 2021

February 08, 2021 -

When looking for a dentist near me in Logan, Utah, and surrounding areas like North Logan, River Heights and Providence, people can rely on Dr. Edwin Hurst of NuSmyle Dental. They have been pleased to announce that Dr. Hurst offers a wide range of general dentistry services, which means that those who have a toothache, a tooth decay, a dental abscess, or require wisdom teeth removal, etc., can depend on this particular dental office. More info about Dr. Hurst and his dental practice can be obtained from <https://nusmyle-dental.business.site/#summary>.

Dr. Edwin Hurst is a member of professional associations, such as the American Academy of Cosmetic Dentistry (AACD) and the American Dental Association. He has also garnered the highest award that can be provided by the Academy of General Dentistry (AGD), which is that of Master in the AGD. And he is also an associate fellow of the American Academy of Implant Dentistry.

Dr. Hurst, through his NuSmyle Dental practice, offers general dentistry, fillings, crowns, cosmetic dentistry, implants, dentures, bridges, teeth whitening, extractions, veneers, root canals, and gum treatment. As a remedial solution for tooth decay, the dental practice offers dental fillings for cavities that range in size from

small to medium. They will use a dental filling that is made from a composite material that contains silica particles embedded in a light activated resin. This composite material is very strong and durable and its color is similar to a natural tooth, thus, it is hardly noticeable.

NuSmyle Dental also offers the best possible solution for dental crowns. Dr. Hurst wants to point out that a dental crown is useful for a number of reasons, such as when there is deep tooth decay, cracked or leaking teeth, worn-down teeth, or developmental problems with teeth. To ensure the best results, Dr. Hurst always ensures that the nerve is healthy before preparing the crown by performing a number of tests before anesthetization. Next, he will get rid of all the decay and old material until the solid tooth structure is reached. He then builds up the tooth with an all new material.

Meanwhile, Dr. Hurst has already done thousands of cosmetic dental procedures during his 27 years of practice as a dentist. Because he is a member of the AACD, he takes advantage of this to keep himself informed on the latest and most effective cosmetic dental treatments to ensure that he can provide the best possible service to his patients.

NuSmyle Dental has also invested a lot of time, money and resources to be able to provide dental implants. An implant functions as an artificial root in the upper or lower jaw of the patient. The implant is then provided with a crown to provide the patient with a natural-looking artificial tooth, or it can be used to support an artificial appliance, such as a denture. Dental implants can greatly improve the comfort felt by a patient who wears dentures. When these dentures are attached to a dental implant, they are more stable and stronger and they don't shift or move when the patient is eating, talking, or doing some other activity. The patient's smile is not only improved but also his or her speech. And it is easier and more comfortable to eat.

Meanwhile, dentures are for patients who have lost a tooth or several teeth. They provide a restorative solution for missing teeth and the dental practice offers some of the most life-like dentures possible. Partial or complete dentures may be provided, depending on the needs of the patient. And they can be conventional or immediate dentures. Conventional dentures are appropriate for patients who already have dentures and would want to obtain another set. Immediate dentures are made and then placed right after tooth extraction.

People who are interested in learning more about the general dentistry and family dental services offered at NuSmyle Dental may want to visit their website, or contact them through the phone or via email.
