

Positive Pest Control of NYC Offers Healthcare Pest Management

February 04, 2021

February 04, 2021 - PRESSADVANTAGE -

Positive Pest Control of NYC, a pest control company based in New York, NY, is pleased to announce that they are offering pest management services for healthcare facilities in New York City. Whether the healthcare facilities are located in a luxury brownstone in the Upper East Side or a high-rise building in Midtown, they are ready to ensure that the building will be free from pests through proactive pest control that protects the comfort and safety of the people in the building.

The company has specialized in commercial pest control services and has been able to meet the specific and diverse requirements of property managers, landlords, tenants, and building superintendents throughout the years. In addition to eliminating pests, their main focus has always been on building relationships and helping build and protecting the reputation of their clients.

Benett Pearlman, owner and operator of Positive Pest Control of NYC, says, "One thing that buildings in New York City have in common is that they each have their challenges when it comes to pests and pest control.

Even the newest buildings in the city are at risk from different pests and rodents. Our company is experienced throughout NYC. However, with a large percentage of our clients in Manhattan, we understand the needs commercial buildings and multifamily units in this area very well.?

He adds, "Insects and rodents that find their way into medical facilities are capable of transmitting infectious disease and they can increase the risk of secondary infections. When it comes to healthcare, pest control is a vital concern with some of the most delicate environments that are monitored continuously for the slightest incursion. Healthcare pest management is a serious business, and the technicians at Positive Pest Management are there to protect the buildings, doctors, nurses, and, most importantly, the patients that require a clean and safe environment.?"

The most common pests in New York City are rodents. Currently, the rodent population in the city is much larger than that of human beings. While New Yorkers have become used to finding rats in various places in the city like the subways and in the various paths by the rivers on either side of the island, it is a different story altogether when rodents start to invade a building, especially a healthcare facility. To know more about Positive Pest Control of NYC and their services, people may also want to check out their Facebook page.

Unfortunately, rodents such as rats and mice tend to prefer places where humans live because of the warmth of the surroundings and the relative abundance of food. They love to forage for food but while doing so, they inadvertently cause damage to buildings and contaminate food storage areas. They can also carry disease-causing germs and spread these diseases to pets and people.

Positive Pest Control of NYC advises property managers to act right away if they discover rodent infestation in a building or facility. However, they strongly advise against using the usual ways of killing rats and mice with poison as this can involve risks for pets and people. It is essential to use natural ways to solve the rodent problem, such as setting up traps, making the place less appealing to rodents, and installing electric rodent repellents. However, these can't be guaranteed to work effectively for long. It is advisable to get the services of a pest control company like Positive Pest Control of NYC for a more effective and efficient way of eliminating rodents and keeping them away.

Those who would like to know more about the healthcare pest management services offered by Positive Pest Control of NYC may want to check out their website or contact them on the phone or through email.
