

ABC Environmental Contracting Services Proving to be One of the Most Reliable Asbestos Testing Services in St Louis

February 08, 2021

February 08, 2021 - PRESSADVANTAGE -

ABC Environmental Contracting Services is a veteran-owned company that specializes in asbestos abatement and other urgent restoration services. They realized early on the important role that asbestos testing services in St Louis would play in them being able to properly do their asbestos removal work. They now have several crew members that are experts when it comes to establishing the presence of asbestos in homes and buildings. The company's experienced inspection teams use both visual inspections and advancing testing methods to determine if any area of a structure is indeed contaminated with asbestos.

Dan Benton, the owner of ABC Environmental Contracting Services, says, "It's been well-established that asbestos-contaminated items are nothing that you want to be around for very long. That's why we have spared no expense when it comes to the asbestos testing equipment that we have purchased. Our testing methods are so precise, that if you have asbestos in your home or building, we will find it. Not only that, but we are also the best in the area when it comes to safely getting rid of it for you."

The company owner continued by saying that asbestos is a naturally-occurring fibrous material that was found to be heat resistant and strong. It was also available in large quantities very cheaply. Soon the rush was on by manufacturers to add asbestos to all sorts of building and automotive materials. This includes brake pads, ceiling tiles, batt insulation, roofing shingle, flame retardant material, air duct coverings, textured paints, and wall patching compounds. He added all of this use took place before it was discovered that this material when in a powdery state could give off dangerous microscopic "fibrils". These fibrils have the potential to cause a wide range of health effects. The worst of which are several life-threatening forms of cancer. There was a time when it was hard not to be able to find a trace of asbestos in a home or building. Benton says that's what makes their asbestos testing services so critical.

Benton says that asbestos testing is not something that they take lightly. Because they know the serious health risks that exposure to asbestos poses, their testers do not enter into a home or building wearing street clothes and just start testing right away. He says they take the same steps to protect themselves as their asbestos removal crews do. That includes PPE's, sample collection equipment, plastic sheeting to be placed down in sampling areas, and several different test kits that have different asbestos identification properties. The owner of this asbestos testing company went on to say that once their tests have confirmed the presence of asbestos, they will then get together with a home or business owner and discuss a plan of action with them to get their potentially harmful asbestos-containing items safely removed. Once the crew has completed their asbestos abatement of a premises, they will even go back in that home or building and retest the air for traces of asbestos just to be sure that they got it all.

The company's asbestos removal work has also been getting glowing reviews from their customers that have used this service. Shannon Ward proclaimed, "I am thoroughly impressed with this company! We hired them to remove asbestos tile from our house in Wentzville and they did a fantastic job. They kept everything very clean and were very knowledgeable, professional, nice, and educated us on the removal process. I will definitely recommend them to all of my friends and family!" This is one of 16 reviews on the company's services that have been left on their Google Maps Business Listing. Every single one of those reviews rates ABC Environmental Contracting Services a perfect 5 out of a possible 5-stars.

Benton mentioned that besides asbestos testing and abatement, their crews are also very proficient when it comes to water damage cleanup, mold remediation, and fire damage restoration. Home and business owners who feel that they may need asbestos testing in St Louis and the vicinity are encouraged not to delay and contact the company right away by phone, email, or by filling out the form that's found on the homepage of their website.
