

Palisades Dental Offers Teeth Whitening in American Fork Utah

March 05, 2021

March 05, 2021 -
Palisades Dental - American Fork, UT Dentist is happy to announce that they are offering teeth whitening, among other cosmetic dentistry services, in American Fork and neighboring areas. Apparently, teeth whitening is one of the most in-demand cosmetic dentistry procedures, which is why they are proud to announce their teeth whitening service that will not cause damage to the patient?s teeth. Dr. Jeff Youngquist, who is regarded as one of the best dentists in American Fork, utilizes the best teeth whitening services to provide patients with a cost-effective, save, flawless, and convenient smile.

It is with the help of Dr. Youngquist?s safe and hassle-free teeth whitening method that Palisades Dental has gained the reputation of being a premier cosmetic dentistry office in American Fork and surrounding areas, such as Cedar Hills, Lehi, Vineyard, Orem, Highland, and Pleasant Grove.

Dr. Jeff Youngquist says, ?Our teeth whitening process is quick, so you?ll only need one visit to complete the procedure, and you won?t have to wait to see results because your smile will be whiter and brighter immediately following the procedure. If you?re sick of waiting around to receive the promised results of a store-bought tooth whitener, or you just don?t have the time to wear those pesky mouth guards, then our

teeth whitening service is the perfect solution for you.?

While there are a lot of over-the-counter teeth whitening products, dentist teeth whitening is done by trained professionals, which means that more reliable and safer results can be expected. In addition, teeth whitening that is administered by a dentist or other dental professionals tend to be better than using at-home kits because they have access to higher-concentration teeth bleaching gels. This means that in office whitening can provide much whiter teeth compared to the results provided by over-the-counter products.

Palisades Dental also offers dental implants, which is another popular cosmetic dental procedure. A dental implant is a fixture that is placed surgically into the jawbone and this is allowed to integrate with the bone for a few months. It then serves as a replacement for the root of a missing tooth. An artificial tooth or set of artificial teeth may then be affixed to the dental implant. These artificial teeth are made to look very similar to natural teeth with the result that they look and feel like natural teeth, thus offering a better alternative to removable dentures.

They also provide dental inlays or onlays. Dr. Youngquist starts by cleaning and getting rid of any fillings or decay that could be present. Next, he will create a digital impression of the patient?s teeth and then utilize a CEREC machine to produce an inlay or onlay that is custom-fitted for the patient?s teeth. After that, he will cement the final inlay or only into the appropriate position and make sure that the correct bite alignment is provided. The last step would be to match the custom inlay or onlay with the neighboring teeth by polishing teeth to ensure a perfect match. It should be noted that not every situation will require inlays or onlays. Thus, Dr. Youngquist will always make sure first that the said cosmetic dental procedure is truly appropriate for the patient.

Palisades Dental also provides dental exams, wisdom teeth removal, dental x-rays, and more. This dental office also provides preventive dental care to provide help to people in avoiding tooth cavities and other dental problems. They recommend that people have a dental checkup every six months to make sure that any dental issues that are just beginning can be detected and treated as immediately so that they will not develop into something more serious.
