

AFYA Skin and Body Laser Clinic Announces Location Change in Guelph Ontario

April 21, 2021

Guelph, Ontario - April 21, 2021 - PRESSADVANTAGE -

AFYA Skin and Body Laser Clinic is pleased to announce that their Guelph, Ontario, Canada location has moved to 55 Delhi St. to serve their customers better. Everything they have been offering is still there except that they have added everything else that's considered great in the industry. And they will continue to be focused on restoring the vitality and health of clients' skin and body.

A spokesperson for AFYA Skin and Body Laser Clinic says, "Our goal in this new space is to create an overall amazing experience for our guests from the moment you walk in. We are still AFYA Skin and Body but have added a touch of luxury into our space, and we are so excited to embark on this next journey with our clients and clients to be."

AFYA Skin and Body Laser Clinic provides treatment for various conditions, such as acne, acne scars, cellulite, cherry angiomas, cholesterol deposits, excessive sweating, face and body scars, fat loss/body contouring, sagging buttocks, thinning hair, large pores, thin lips, loose skin, melasma, rosacea, skin tags,

spider veins, stress incontinence, stretch marks, sun damage, unwanted hair, vaginal dryness, vaginal/labia tightening, and wrinkles and fine lines.

For acne, they both address the current acne breakouts and the root cause of the acne. They will first evaluate the skin of the client to determine the grade of the acne and come up with a comprehensive approach for healing the skin. They can combine a number of treatments to eliminate excess oil, unclog pores, tighten pores, destroy acne bacteria, and reduce scar tissues. Treatments may include chemical peels, acne facials, IPL photo rejuvenation, natural skin supplements. More about AFYA and their treatments offered can be gleaned from their Instagram page.

For cellulite, they will also take a comprehensive approach by focusing on three primary goals. These are the reduction of the number of fat cells, the tightening of the skin tissue, and the reduction of the fibrous tissue that are pulling the skin to create the dimpling. They use technology to destroy the fat instead of just shrinking the fat. They utilise the only machine that is capable of simultaneously tightening the skin, thus providing the best available solution for cellulite.

AFYA Skin and Body Laser Clinic also specializes in getting rid of ruby points and cherry angiomas. These are red spots on the skin, anywhere on the face or body, that may be flat or raised and are the result of a cluster of blood vessels under the skin. These can be safely eliminated by using a thermocoagulation device, particularly Vasculyse. This device uses thermocoagulation to get rid of unwanted skin tissue. It can also be used to treat capillaries by collapsing the unwanted blood vessel, permitting the body to get rid of the unsightly vein.

Meanwhile, for unsightly cholesterol deposits, they recommend their safe removal through a thermocoagulation device, the Vasculyse. These are white or yellow toned bumps that are typically found under the eye area and also around the forehead.

Excessive sweating or hyperhidrosis is eliminated through the Fractora RF treatment provided at AFYA Skin and Body Laser Clinic. This device uses radiofrequency waves to induce the production of heat in the lower layers of the skin tissue around the sweat glands. The heat will help in reducing the ability of the sweat glands to produce sweat, thus treating hyperhidrosis.

They can also help eliminate various kinds of scar tissue, such as atrophic or depressed scar, acne scars, and hypertrophic or raised scars. They can use a number of treatments to get rid of scars, such as Fractora, IPL photo rejuvenation, chemical peels, and Eclipse MicroPen.

AFYA Skin and Body Laser Clinic also offers fat loss, muscle toning, skin tightening, and body contouring treatments. They use a combination of heat, radio frequency, and electronic muscle stimulation with the most

advanced technology in the market to provide you the expected results. These include the Evolve Trim, Evoke, Evolve Tite, and Evolve Tone.

Those who are interested in knowing more about the services to help people achieve healthy skin and body can check out the AFYA Skin and Body Laser Clinic website, or contact them on the phone or through email. Those interested can also follow their Facebook page.
