

Cox Roofing Is Offering Commercial Roofing Services In Brampton, Ontario

April 16, 2021

April 16, 2021 - PRESSADVANTAGE -

Cox Roofing Systems is offering commercial and residential roofing services in Brampton, Ontario. The company has released a blog post discussing the five reasons homeowners of flat or modern homes should think twice about using asphalt shingles or clay tile roofs and instead opt for metal roof restoration using spray polyurethane foam (SPF).

The first major advantage of choosing metal roof restoration is that it is faster to install. SPF applicators don't need to tear down the old roofing material. Even aged and rusted metal roofs have stronger integrity compared to traditional roofing materials. To accommodate the SPF roof's additional weight, the applicator only needs to check the roofing joints and other areas of the roof's foundation.

SPF roofs are more affordable and a better long-lasting solution. They can provide 50-70 years of durable and exceptional flat roofing for the property while being two-thirds the cost of metal roofing materials. Also, the homeowner won't need to spend extra to tear off the roof. SPF will fill in the nooks, crannies, and cracks of the metal roof. Then it will provide an extra layer of protection that can withstand heavy rains, winters, and hot summers.

SPF applicators work fast to find the compromises on the roof and can usually apply sufficient coating to resolve the problem in just a day. Traditional roofs can take weeks or even months to fix, even for a simple small spot repair. It takes time to identify the compromised roofing material and leaking section for traditional roofs. Metal roof restoration ensures that the roof lasts for a long time with minimal maintenance and exceptional dependability.

Another advantage of SPF roofing is that SPF applicators are trained and educated in their craft and are certified to practice it. Cox Roofing says that all of its technicians are certified and licensed to perform SPF flat roofing and metal roof restoration. The certification acts as proof of the company's capacity to deliver high-quality results while maintaining safety for everyone involved. This gives homeowners peace of mind that they are paying the best possible contractor for the job.

Finally, the Cox Roofing Systems blog post says that SPF roofing offers the best energy efficiency and insulation properties. Since the materials create a tight and singular seam, water and air cannot penetrate through the roof. As a result, the roofs do not decay and do not harbor microbes. This increases the longevity of the roof.

Cox Roofing is a family-owned and -operated business that has been operational since 1976. The roofing contractor also serves the regions of Barrie, Markham, Mississauga, Richmond Hill, Toronto, Vaughan, and Windsor. The company offers repairs for many roof types including metal, foam and coating, EPDM, PVC, and TPO. They also offer services such as roof thermal imagery, roof restoration, TTR, Firestone, sales & installation, energy audits, roof consulting services, structural engineering, and roof inspection with free estimates.

Cox Roofing owner Wayne Cox talks about the quality of work that the company delivers by saying, "We strive to give our customers a higher standard of results. Being good is just not good enough for us. We have survived in this business for as long as we have because we go above and beyond on every job. Our customers don't have to worry about any aspects of the job once they trust us with it. We have strict protocols in place that our supervisors follow to ensure we deliver every job to a high standard of quality. We give customers daily reports to keep them updated on the progress at all times. We are open and honest about all of our work and pricing. We give our customers all the information that they need to make the best decisions regarding their roof. Call us or leave us a message using the contact form on our website to find out why we are the best option for commercial roofing in Brampton."
