Mold Remediation Provider in Charlotte NC Receives NORMI Certification

April 20, 2021

April 20, 2021 -
Charlotte Crawlspace Solutions,LLC. a company based in Monroe, NC, that offers mold remediation in Charlotte and neighboring areas, is proud to announce that they have received recognition as a certified mold remediator from the National Organization of Remediators and Mold Inspectors (NORMI). NORMI is made of a group of certified professionals who were able to successfully complete their licensing (where applicable), training, and certification in their particular area of expertise. As such, the NORMI website allows homeowners and other property owners to find active NORMI professionals near them.

Carlos Rendon, President of Charlotte Crawlspace Solutions, says, ?We constantly strive to provide better service for our customers and in that vein, we proudly announce our recently approved professional Certification as Mold Remediators from the NORMI ? the National Organization of Remediators and Mold Inspectors. Thus, you can be confident that our listed members are fully trained and qualified to assess your issues and resolve them thoroughly for the health of you and your family.?

Charlotte Crawlspace Solutions,LLC. offers mold removal in Charlotte, Waxhaw, Sherrills Ford, and other areas in North Carolina. They are ready to help homeowners and other property owners in identifying sources of moisture and then cleaning and removing the mold. They can also develop a game plan for the property to prevent mold growth from reoccurring.

A key service that they provide is remediation of odor and moisture problems in crawl spaces. Summer in the Charlotte area comes with high humidity levels and increased heat in the crawl space area, which encourages the growth of mold, wood rot, and mildew. This condition also attracts insects such as spiders, termites, and other crawling insects. Mold growth is hazardous for people who have allergies or asthma.

Charlotte Crawlspace Solutions (CCSS) can provide crawl space remediation, which can prevent a number of problems. These potential problems include: mold and mildew growth; wood rot, which could consume the

home?s wooden structural posts and beams; soaked fiberglass insulation that reduces its insulating properties; increased condensation on air conditioning ducts or equipment; musty smells; soft or spongy floors; high cooling costs; and more.

With regards to mold removal, they want to point out that they use a cleaning process that uses OxyPrep and OxyPar, which creates a foam upon contact with the contaminants, thus offering a visual indication of those areas with a mold problem. This enables them to clean and then completely restore the structural services in the crawl space or basement. They will then measure the amount of moisture to find out if they can start with surface protection. Step by step, their process is as follows: determine those areas where mold is visible and wooden structural components that have to be removed because of wood decay; remove decayed wood that need to be replaced; apply OxyPrep and let this sit on the wood for several minutes; apply OxyPar and allow the foam to help in bringing the residual organic contaminants to the surface; and finally, wipe off the wooden surface.

Using their more than 20 years of construction experience, CCSS can also help with wooden crawl space structural repair or replacement. They are specialists in the repair and replacement of wood components damaged because of rot, pests, warping, mold, or other circumstances such as floods or fires. They would like to warn homeowners and other property owners that this task cannot be a DIY project. If the foundational structure of the home or building has been compromised, over time this will result into drywall cracks, doors that are sticking or cannot be closed, and warped or sloping floors. They are capable of handling all kinds of wood crawl space repairs, including all floor system components such as girders, floor joists, sill plates, and subfloor, including the repair of support columns or piers.

Those who are interested in learning more about the NORMI mold remediator certification of Charlotte Crawlspace Solutions and the services they provide can check out their website, or contact through the telephone or via email. They are open from 8:00 am to 6:00 pm from Monday to Friday, and from 8:00 am to 3:00 pm on Saturdays.
