

STEVENS Engineers & Constructors Explains Best Ways To Customize A Metal Building

April 20, 2021

Middleburg Heights, Ohio - April 20, 2021 - PRESSADVANTAGE -

Ohio-based STEVENS Engineers & Constructors is the leading name in the steel building construction industry. After their most recent article highlighting how long it takes to erect a metal building, The top Ohio industrial steel building contractor has released a new article highlighting the best ways to customize a metal building. STEVENS explains the versatility in using metal for constructing a commercial retail space, agricultural building, aircraft hangar, storage facilities, or a recreation center.

To read the full article, click on the link below, <https://www.stevensec.com/blog/best-ways-to-customize-a-metal-building>.

The article highlights the durability and customization of metal in the construction industry. STEVENS explains the ease with which steel can be colored to make the whole unit stand out. Adding a pop of color can add visual appeal to prefabricated steel buildings. ?The color of your building will depend on its use, and you are not limited in the colors available for your building,? explains Vicki Anderson, CEO, adding

?Regardless of which hue you choose, picking a custom color is an option when you use a top metal builder like STEVENS.?

The Pre-engineered metal building company in Ohio designs safe metal buildings and can customize the exteriors to give it the curb appeal that businesses desire. Customers can choose faux rock and stone panels, glass, brick, steel panels, or fiber-cement board to create a more upscale customized exterior. STEVENS is an expert at incorporating wainscoting to improve the prefab steel building?s exterior, adding a contrasting color or texture.

The Ohio steel construction company emphasizes the importance of customizing doors, windows, and shutters to match the style of the building. Some of the most popular options include overhead doors, barn doors, glass patio doors, embellished doors, metal walk doors, and double front doors.

STEVENS Engineers and Constructors is a trusted name in pre-engineered metal building constructions. The custom design windows and shutters, a design aspect that most often gets overlooked, states the article, adding ?they are another one of the most important customizations to add to your building.?

According to the prefabricated metal building expert in Ohio, the right windows are a natural light source and add visual appeal, and shutters add that extra special touch.

Another striking element on the STEVENS? list of customizations is stucco, which can add curb appeal and easily blend in with surroundings. A veneer is another interesting element to accentuate the appeal of the exterior. A brick veneer adds a classic look to the building, and faux stone or rock adds rustic appeal.

?You can do many things to your metal building to keep it from looking like an old barn,? says Anderson. STEVENS is the top metal building supplier in Ohio with decades of experience in custom designing metal buildings to meet their client?s specific needs.

The pre-engineered metal building experts at STEVENS offer many choices for clients to choose a custom design. Anybody interested in creating a prefabricated steel building should get in touch with the leading Ohio metal builder. STEVENS has decades of experience in the pre-engineered metal building industry and can design custom-engineered metal buildings. Experts at STEVENS can offer a no-obligation quote on the company?s website. Get in touch with them today.

"name": "WHAT ARE THE BEST WAYS TO CUSTOMIZE A METAL BUILDING?",

"headline": "What Are The Best Ways To Customize A Metal Building?",

"articleBody": "What Are The Best Ways To Customize A Metal Building? No matter what type of building you're constructing, whether it's a commercial retail space, agricultural building, aircraft hangar, storage facilities, or a recreation center, you can make your steel building your own by adding your own personal touches. Many people think the biggest advantage of metal buildings is their durability. And while durability is a huge advantage of pre-engineered steel buildings, it's not your only advantage. Another huge benefit of pre-fab metal buildings is the ability to customize them any way you see fit. You can do so many things to your metal building to keep it from looking like an old barn. Even though having your metal building look like an old barn is your most economical option, there aren't many people who want their building to look like that unless they are building a barn. In the article below, we will discuss the best ways to customize your metal building to make it your own. Table of Contents Make The Most Of Your Colors Dress Up The Exterior Custom Door Styles Custom Windows and Shutters Get Creative With Stucco or Veneer How To Install Wood Siding On A Metal Building Contact STEVENS Today Make The Most Of Your Colors One of the best ways to make your steel structure stand out is to add a little color. Not every steel building has to be grey, even though grey can look good as well. The color of your building will depend on its use, and you are not limited in the colors available for your building. Maybe green or blue will bring the vision for your building to life. If you don't want to be quite as bold, maybe black or white can add the personality you need to your building. No matter what metal building color you desire, you have a variety of colors available to make your building your own. Regardless of which hue you choose, picking a color is a must-do part of your project. -back to top Dress Up the Exterior There are more ways you can dress up the exterior of your building in addition to adding some color. Standard steel exterior panels are always an option and the most affordable option, but if you're a customer that prefers a more traditional exterior, we've got you covered. Just about any exterior finish, you can think of can be used to customize a metal building. You have your choice of any of the following, either alone or combined with each other, to create a more upscale, custom exterior: Faux rock and stone panels Glass Fiber cement board Steel panels and cool-coated panels Brick Concrete block Stucco or wood (we'll talk more about these later) You can also incorporate wainscoting to improve the curb appeal of your industrial steel building. Wainscot adds a contrasting color or texture to the bottoms of your exterior walls. -back to top Custom Door Styles Adding custom doors can not only add to your curb appeal, but it can make it much easier to access your building. Time and time again, we have customers completely overlook

this part of their build, but doors may be the most important aspect. You have several door styles and colors to choose from, and you may also opt to build a custom door that fits your metal building perfectly. You can choose from: Barn doors Glass patio doors Overhead doors Embellished doors Double front doors Metal walk doors -back to top Custom Windows and Shutters Windows and shutters are another aspect of the building plan that gets overlooked, but they are another one of the most important customizations to add to your building. The right windows will allow natural light to shine through, but they can also turn the heads of everyone that passes by your building. From their size and shape to the color of the trim color, your windows can be customized to match your building perfectly. The shutters you choose the cherry on top that can add that extra special touch to make the building look unique. -back to top Get Creative with Stucco or Veneer Your metal building facade can be whatever you want it to be, especially if you use stucco or veneer. Stucco has been one of the most popular ways to customize a metal building for as long as we can remember. Stucco can add curb appeal or, if you want to go the opposite way, it can help you blend in with your surroundings. You can use traditional stuccoes, like those you'd find on a residential building, to siding panels. Either way, stucco is an excellent way to add your own touch of uniqueness (or lack thereof) to your building. You can also add a veneer to your exterior. You can use a brick veneer to add a classic look to your building. Or you could add faux stone or rock if you're looking for a rustic look or something more modern, depending on your design. Your metal building manufacturer should have a wide variety of veneer options available so you can be as creative as you'd like. -back to top How To Install Wood Siding On A Metal Building Many people love the durability and other advantages of a standard metal building, but they are still in love with the look of wooden buildings. If that sounds like you, you're in luck because you can add wood siding to your metal building design. Wood or shiplap siding can be added to your building using similar construction methods for applying traditional siding panels. With wood siding, though, you want to be sure you have large roof overhangs to keep the water off of your wood. You also want to keep your wood off of the ground and don't let it rest on the ground or concrete. Be sure to use spacers between your boards because you don't want water to build upon any horizontal surface. Wood or shiplap siding can be added to even the most basic metal building to make it look extraordinary. Just keep in mind that wood is a little more high maintenance than steel. To keep your wood siding looking its best, you should apply clear finishes every 2-5 years. You should reapply semi-transparent stains every 3 years. If you decide to paint your wood siding, you may be able to go 5-7 years before you have to repaint it. But regardless of the method you choose for your wood siding, regular maintenance will be necessary. -back to top Contact STEVENS Today If you like all the customizations available for steel structures and you're ready to get started on your metal building project, contact STEVENS. STEVENS has years of experience in the industry and is the parent company of CDMG, a well-known metal building manufacturer. STEVENS is ready to help you through the entire building process, and make you the proud owner of a custom metal building. Click the button below to get started today. ",
