Ambience Dental, a Dental Office in Wollongong, Explains the Importance of Cosmetic Dentistry

April 22, 2021

April 22, 2021 -

Ambience Dental, a dental office in Fairy Meadow, NSW, Australia, explains why cosmetic dentistry is an emerging field of dentistry and its various components. This particular field of dentistry has been growing in popularity and the international cosmetic dentistry market is projected to grow at a compound annual growth rate (CAGR) of 2.2 percent from 2020 to 2025. Ambience Dental is well-established practice in the city of Wollongong that is located in the suburb of Fairy Meadow.

They want to point out that cosmetic dentistry is focused on aesthetics and not just on teeth function. As such, it is made up of a wide range of treatments that are involved in changing the position, colour, alignment, and shape of the teeth to ensure that the patient will have a beautiful smile, while also improving the functionality of the teeth. There are various types of cosmetic dentistry and these include: teeth whitening, dental veneers, dental bonding, dental crown, inlays and onlays, and dental implants. Ambience Dental also uses modern technologies, such as digital smile design and Chairside Economical Restoration of Esthetic Ceramic (CEREC).

Vivek Reddy, Practice Manager at Ambience Dental, says, ?Whether you have discoloured, misaligned or

crooked teeth, there is a treatment suitable for you. What's more, while cosmetic treatments are focused on the aesthetics, how you?ll look afterwards, they often also improve the functionality of your teeth. So, if you want to love your smile again, why not find out more about the cosmetic dentistry treatments we provide in our Wollongong practice??

Teeth whitening is an important component of cosmetic dentistry. Here, the Wollongong dentist can offer the patient both in-chair and take-home whitening. For the take-home kit, the dentist will take an impression of the patient?s teeth and create custom-moulded trays and provide the patient with a special whitening solution that is safe and will provide natural-looking whiter teeth. The same thing can be provided through their in-chair teeth whitening service, which will take just one hour. The dentist will analyse the colour of the patient?s teeth and discuss with the patient how many shades lighter would be the targeted result. The dentist will then apply a bright light in combination with a special whitening solution.

Meanwhile, dental veneers are thin porcelain shells that are bonded to the front of the teeth as a way to modify their colour and shape, thus, serving as a remedy for discoloured, damaged, or misaligned teeth. A small portion of the tooth enamel will be removed by the dentist to provide a better bonding surface. An impression of the teeth will be taken and sent to the laboratory to make sure that the restorations will have the appropriate colour and will fit perfectly.

Dental crowns are replacement caps for the teeth and they are usually made from ceramic or porcelain. They are also made such that their colour and texture will match the patient?s teeth, thus improving both their appearance and functionality. Dental bridges are used as replacement for missing teeth by bridging the gap between two crowns. They are usually constructed from porcelain and fused to metal to provide them with durability and strength.

Dental restorations can be assisted through the CEREC method, which uses CAD/CAM software to design and create the restorations. The designs are made from impressions using computer software and then these are fed to the machine that makes the ceramic restoration.

Dental implants are typically made from titanium and are designed to replace the root structure of missing teeth. They are placed in the jawbone to provide an artificial root to which replacement teeth will be attached using an internal screw. The titanium implants will gradually fuse with the bone to provide a strong foundation for the new artificial teeth. After the replacement teeth have been attached, the teeth will feel and function very much like natural teeth.

Meanwhile, with digital smile design technology, they will take high-resolution photographs and videos of the patient?s face. Enhanced digital technology will then be used to provide a visual representation of what the patient?s smile will look like after a particular treatment. This will allow the patient to make better decisions on

which treatments to choose.

When looking for trustworthy cosmetic dentistry Wollongong residents can check out the Ambience Dental website or contact them on the phone or through email. They are open from 8:00 am to 5:30 pm from Monday to Thursday; 8:00 am to 5:00 pm on Fridays; and 9:00 am to 12:30 pm on Saturdays.
