

Solar Roofing Company Christian Solar Is Offering Its Services In San Diego

May 14, 2021

El Cajon, California - May 14, 2021 -
Solar roofing contractor Christian Solar is offering its services in San Diego. The company?s services can be availed of by any residential, commercial, or industrial project of any scope or size.

According to a renewable portfolio standard regulation, California is aiming for 60% of its energy requirement to come from renewable sources by 2030. This includes the California Solar Initiative which was backed by a budget of over 2 billion dollars between 2007 and 2016. The cash incentives were put in place in order to encourage individuals and industries to take up the goal and move to a cleaner source of energy. As a result, the installed generating capacity has increased greatly year on year since the inception of the program. The landscape is ripe for families and businesses looking to turn over a new leaf by taking advantage of the incentives.

There are also federal programs that can be taken advantage of by those waiting to bite the bullet and make the call. Businesses and residential homeowners can claim the federal residential solar energy credit on federal income taxes for a percentage of the cost of a solar photovoltaic system that they choose to install. The tax credit is 22% for systems installed in 2021 and the tax credit is scheduled to expire starting in 2022.

The expiry of the tax credit requires those waiting on the sidelines to make a timely decision before the ship sails on the benefits for good.

Installing solar infrastructure in a home is very technically challenging. It requires a breadth of experience in not just roofing and construction, but also requires the contractor to stay abreast of the latest solar technologies. This requires skilled professionals to dip their toes in two disparate worlds to offer the best quality service possible. The engineers at the San Diego solar company Christian Solar are aware of the challenges in both industries and are able to work around them to make solar installation seamless and transparent for the end-user.

Residential customers can expect a reduction in their electricity costs by almost 50%. Photovoltaic cell arrays in combination with in-home solutions such as low energy LED lighting and solar water heating can help a homeowner greatly cut down on their energy usage from the local grid. The benefits are not just environmental but also financial as laws such as net metering ensure that the excess electricity that is generated by the home or business is sent back to the grid leading to lower energy bills.

Commercial customers can take advantage of incentives provided by local bodies to boost their business and improve the bottom line. The San Diego Air Pollution Reduction Act, for example, offers businesses in the city the motivation required to make the switch and move to a more sustainable, more eco-friendly energy source. It is just one example of the many relevant rebates, financial incentives, and tax breaks that have been put in place by local governments all over the state and country. Christian Solar says that it can work with businesses to help them get the maximum afforded benefits.

A spokesperson for the company talks about their service by saying, ?The time to move to the new energy paradigm is now. There has never been a better moment to take the plunge into the exciting world of renewable energy. The future is at our doorstep and it is only a matter of time before renewable energy usage becomes the norm. There can be a lot of uncertainty when adopting a technology that still hasn?t fully matured. You need someone in your corner that understands the business and uses their expertise to deliver the best possible customer experience. Christian Solar is the company that you?ve been waiting for. Anyone in San Diego contemplating getting a solar installation should give us a call to find out why we are one of the best in the business.?

Christian Solar can be contacted at the phone number (619) 401-9607. Its office is located at 1226 Greenfield Drive, El Cajon, CA 92021.
