

Local Concrete Contractors Now Serving Fishers, Indiana

May 20, 2021

Fishers, Indiana - May 20, 2021 - PRESSADVANTAGE -

There are times when a property owner may need professional concrete services, whether it's to lay a new driveway, create a sidewalk or something else. High Capacity Concrete Contractors is now serving the Fishers, Indiana area with reliable, top quality concrete solutions.

"We provide an array of commercial and residential concrete services including small and large projects. We believe in delivering quality services at affordable pricing and it is our goal to provide upfront pricing, meet the deadline set and efficiently communicate with you from start to finish," the owner said.

The company provides a range of flatwork services including driveways, garages and basements. They work with both property owners and home builders or general contractors. For clients that want something unique or a little less "plain" their experienced concrete contractors can also do stamping, staining, and dying, among other aesthetic tweaks.

"When we work on a job, we focus on quality. You can expect a nice, smooth finished project by the time we are done. We aren't sloppy or lack passion for the task at hand. Each of our team members was carefully selected to ensure we have the best of the best working on your concrete project," the owner added.

"We can also help with repairs or replacement of your existing concrete. While concrete is a very durable material, it's not invisible to damage caused by adverse weather conditions or water leak damage. Our team will help you restore the area back to new so you can focus on more important things."

As the owner mentioned, concrete is not exempt from becoming damaged and sometimes repairing it is a better option than replacing it. However, it's important to consult with an industry professional prior to taking any action.

Some reasons for concrete repair include corrosion of rebar, deterioration from freeze-thaw, and reactions to alkali-silica, among others. The business owner stated that they happily work closely with their clients to evaluate their concrete needs and determine the best approach that fits their budget and their schedule.

To learn more or to schedule concrete repair or installation services in Fishers, IN with High Capacity Concrete Contractors they can be reached by phone or on their website. They encourage residents to contact them even if they just have a question about their situation.
