TK Roofing & Gutters Explains How To Prevent A Leaking Roof During A Storm

June 04, 2021

Akron, Ohio - June 04, 2021 -
TK Roofing & Gutters Emphasizes Taking Steps To Prevent A Leaking Roof During A Storm

TK Roofing and Gutters has posted an article explaining the steps that need to be taken for a leaking roof during a storm. Roof leaks in rainy weather can immediately turn into a major emergency, warns Daryl Gentry, owner of TK Roofing. The experienced roofing company in Ohio suggests taking a few crucial steps to minimize the damage to the roof and interiors from an active leak during the rainy season.

To read the entire article, click on the following link; https://www.tkroofingandgutters.com/blog/roof-leaks-during-a-storm.

TK Roofing and Gutters emphasizes the need to protect the home's inside to minimize damage from the storm, including corners or ceiling joints prone to water damage and leaks. In Ohio, the best roofing company stresses taking these steps immediately to make clean-up easier and protect surfaces from any water entering the home.

The roofing contractor in Akron explains that plumbing and AC units are the most common causes of roof leaks, adding that a roofing issue could be at the root of a leak if spotted during a heavy storm.

TK Roofing and Gutters suggests doing a visual inspection to look for obvious signs of the leak. This includes checking for signs of clogged gutters, gaps in the chimney, or around vents or slopes on the roof.

The top Ohio roofing replacement company also stresses the importance of determining water damage coverage by the insurance provider. Homeowner's insurance policies often cover roof leaks and water damage as long as it is not caused by gross negligence or is considered preventable property damage. This is one reason why roof maintenance is essential in keeping homeowners protected.

Insurance covers damage caused by a leak that happened suddenly and unexpectedly. TK Roofing and Gutters highlights the importance of a visual roof inspection from the ground after the storm to find damaged or missing shingles, cautioning homeowners against attempting to get on a wet roof. The local roofer in Akron suggests getting an inspection done immediately by a professional who has the knowledge and experience to handle the task safely. They may choose to place a tarp over the roof leak to prevent further leakage into the home while the roof is scheduled for repairs.

TK Roofing and Gutters boasts a team of top Akron roofers who work hard to assess the storm damage and take steps to prevent any further damage. The #1 roofing contractor in Ohio has been serving the local communities for over 15 years, specializing in roof repair, storm damage, and roof replacements.

Any homeowner looking for a professional Akron roofer can get in touch with TK Roofing and Gutters via its website. Akron's best roofers offer free estimates and inspections to help homeowners gain that peace of mind after a storm.

"articleBody": "Roof leaks can be problematic in any type of weather, but when you notice a leak during a heavy rainstorm, it can quickly turn into a major emergency. Rainy weather is when you are most likely to notice a roof leak. In the days following, roofers are bombarded with calls from worried homeowners. Although it's a great idea to call an experienced roofing company to help you with your leak, there's nothing they can do while the storm is passing through and your roof is leaking into your home. Fortunately, there are some things you can do to minimize the damage to your roof and the interior of your home until the roofers can make it there if you have an active leak. In the article below, we will discuss the things you can do during a storm if you notice a roof leak. Protect The Inside of Your Home The first thing you need to do is take care of the leak inside your home to minimize your storm damage. More often than not, a roof leak will form a small puddle in your attic or ceiling until it finds a way to escape, usually through a light fixture or heating register. The corners or ceiling joints are another easy passage for leaks to get through. Leaks can sometimes happen in multiple places from one source, making it look much worse than it is. If you notice a bulge in your drywall or it looks like your ceiling is holding water, take a screwdriver and poke a hole in the middle of it. That will allow the water to drain in that spot, reducing the damage to the ceiling and collecting the water into one stream. You can always use pots, pans, or buckets to collect the water, but if you have a large outdoor garbage can, that's the best thing you can use. These containers are large, so you won't have to worry about dumping them, and they have wheels, so they are easy to move. If you can, try to move anything in the affected areas that the water could damage. If you have any, putting down a drop cloth, garbage bag, or tarp on the floor can help keep your floor dry. Try to do this as soon as possible because it will make clean up much easier and protect your surfaces from water and dust, and debris that's created by removing any damaged drywall or ceiling tiles. Once you've done damage control on the inside of your home, you can try to find the source of the roof leak. Find Where the Roof Leak is Coming From This part can be a little tricky, especially if you don't know what you're looking for. Just because you notice a water spot or a

dark spot, it doesn't mean that's where the look is on your roof. The most common causes of roof leaks are related to plumbing as well as AC units. But if you're noticing a roof leak for the first time during a heavy storm, your leak is likely due to a roofing issue. During the storm, try and do a visual inspection as best you can. You can look for obvious signs of the leak, like downed branches or missing shingles. You can also check your gutters to see if they're clogged because that's another common cause of a roof leak. If your gutter is clogged, the water from the storm will have nowhere to go, so it will find its way into your roof. If your house has a chimney, try to spot any gaps that may be in the flashing, around vents, or on the slopes of your roof. You can also take a look at the rest of the outside of your house in addition to your roof to find any problem areas. Take notes of anything you find so you can discuss all of your findings with the roofer when they can visit your home. Determine If Your Insurance Company Covers Water Damage If it looks like you might have significant storm damage, another thing you can do while you wait for the roofer to be able to come to your house is to determine if you're covered for water damage by your insurance company. In many cases, roof leaks and water damage is covered by homeowner's insurance policies. The only time it isn't is usually when it's caused by gross negligence, like if you avoided fixing a roofing issue that caused your leak. Homeowner's insurance usually doesn't cover preventable property damage. The main question you have to answer is if there was any way for you to prevent your leaky roof from occurring. You have to prove that the leak was caused suddenly and without warning, which is what storm damage will do. Heavy rains and winds will almost always be covered on your insurance policy. Check Your Roof After the storm has passed, you can do a visual roof inspection from the ground. It may be hard to see where the actual leak is, but you can notice damage or missing shingles. You don't want to attempt to get on your roof, especially if it's still wet. Let your local roofer climb onto your roof for the inspection. They have the experience and knowledge to handle roof inspections safely, and they will know what to look for more than most homeowners will. Most roofing companies will place a tarp over the roof leak to prevent any more water from getting into your home. The tarp should extend over the ridgeline, or water will simply run under the tarp. This will allow your home to be protected while your roof is being scheduled for repairs. Call The Professionals If you follow these steps, you should minimize your storm damage and prevent any further damage from occurring. But you still want to call your local roofing company to come as soon as possible after the storm so they can assess the damage and find a permanent solution. TK Roofing and Gutters has been serving their local Ohio Communities for years, and they can promptly repair your roof if you notice a ceiling leak during a storm. They can fix any damaged areas you notice during a storm, and they'll check for other weak spots to prevent future leaks. If you noticed roof damage during a rainstorm, don't wait to get it repaired. Contact TK Roofing and Gutters today for your free roofing estimate!",
