

Host.AG Launches New 10Gbps Unmetered Bandwidth Service

September 28, 2015

September 28, 2015 - PRESSADVANTAGE -

SOFIA, Bulgaria ? Host.AG, a firm that hosts high-end dedicated servers for corporate clients, announced today that it is introducing a new 10Gbps unmetered bandwidth service. Intended for clients with high bandwidth needs, the unmetered service complements Host.AG?s extensive server hosting offerings.

?Certain use cases simply cry out for massive bandwidth,? said Adam Campbell. ?This is the way the whole IT industry is going. What would have been an eye-popping bandwidth need two years ago is utterly routine today. That?s the need we?re addressing with unmetered 10Gbps.?

Host.AG is known for excellent service, a high degree of privacy and security as well as brand new hardware. The one-year-old company provides both unmanaged and managed services. Host.AG?s goal is to give its clients the time and opportunity to take care of their businesses by providing optimal server management services. They enable clients to avoid hiring costly specialists. Managed services include backup, optimization, monitoring, security, migration and software updating.

Host.AG?s data center is located in Sofia, Bulgaria in the European Union. All servers are from the Dell

PowerEdge family, powered by Intel Xeon processors. Customers are able to access one of the largest, most powerful networks in the world. Situated at the nexus of multiple Bulgarian, European and Asian telecom networks, Host.AG's network has bandwidth capacity of 100 Gbps. The company offers a 99.98% uptime guarantee.

Customer privacy is ensured through the company's registration in the Republic of Seychelles, which has legislation to serve the ever increasing market for privacy-conscious users. All services 100% confidential. Host.AG is also an environmentally conscious, "green" technology business. Servers are located in a new and modern datacenter building that uses renewable energy and energy saving systems.
